Inspection Finding Levels	109
Breast Implants	133
Definitions	136

P R O C E E D I N G S

**Introductory Remarks**

1 DR. MONSEES: Good morning. This is the second  
2 day of the National Mammography Quality Assurance Advisory  
3 Committee. On the agenda today, we will begin with an  
4 update on MQSA reauthorization, hear an update on states as  
5 certifiers, and an update on the voluntary stereo  
6 accreditation program. Then we're going to continue  
7 discussing the agenda items from yesterday. So we will  
8 begin.

9 Dr. Finder has to read something here for a  
10 minute?

11 DR. FINDER: I'm going to read the conflict-of-  
12 interest statement again, the same one that was read  
13 yesterday.

14 The following announcement addresses conflict-of-  
15 interest issues associated with this meeting and is made  
16 part of the record to preclude even the appearance of any  
17 impropriety. To determine if any conflict exists, the  
18 agency reviewed the submitted agenda and all financial  
19 interests reported by the committee participants. Conflict-  
20 of-interest statutes prohibit special government employees  
21 from participating in matters that could affect their or  
22 their employer's financial interest.

23 However, the agency has determined that

1 participation of certain members and consultants, the need  
2 for whose services outweighs the potential conflict of  
3 interest involved, is in the best interest of the  
4 government. Full waivers are in effect for 13 out of 15  
5 participants because of their financial involvement with  
6 facilities that will be subject to FDA's regulations on  
7 mammography quality standards with accrediting, certifying,  
8 or inspecting bodies, with manufacturers of mammography  
9 equipment, or with their professional affiliations since  
10 these organizations could be affected by the committee's  
11 deliberations. The participants include Dr. Barbara  
12 Monsees, Dr. Laura Moore-Farrell, Ms. Patricia Hawkins, Dr.  
13 Ellen Mendelson, Mr. Michael Mobley, Mr. Robert Pizzutiello,  
14 Dr. Edward Sickles, Ms. Patricia Wilson, Ms. Kendra  
15 McCarthy, Dr. Candace Dolat(ph), Dr. Robert Nishikawa, Mr.  
16 Roland Fletcher, and Dr. David Winchester. Copies of these  
17 waivers may be obtained from the agency's Freedom of  
18 Information Office, Room 12A-15 of the Parklawn Building.

19           We would like to note for the record that if any  
20 discussion of states as certifying bodies was to take place  
21 in any meetings of the committee, there would be a general  
22 discussion only. No vote would be taken and no consensus  
23 sought. In the interest of getting as many viewpoints as  
24 possible, all SGEs, including state employees, would be  
25 allowed to participate in the general discussion so that all

1 viewpoints could be heard.

2           Also, several of our members and consultants  
3 reported that they receive compensation for lectures they  
4 have given or will give on mammography-related topics.  
5 However, they have affirmed that these lectures were offered  
6 because of their expertise on the subject matter, not  
7 because of their membership on the committee.

8           In the event that the discussions involve any  
9 other matters not already on the agenda in which an FDA  
10 participant has a financial interest, the participant should  
11 excuse him- or herself from such involvement, and the  
12 exclusion will be noted for the record.

13           With respect to all other participants, we ask in  
14 the interest of fairness that all persons making statements  
15 or presentations disclose any current or previous financial  
16 involvement with accreditation bodies, states doing  
17 mammography inspections under contract to FDA, certifying  
18 bodies, mobile units, breast implant imaging, consumer  
19 complaints, and mammography equipment.

20           DR. MONSEES: Thank you.

21           Our first speaker this morning is John McCrohan,  
22 who will speak about MQSA reauthorization and give us an  
23 update.

24                           **MQSA Reauthorization - Update**

25           MR. McCROHAN: Good morning. I wanted to say a

1 few words this morning about the reauthorization of MQSA,  
2 and before I go into some of the specifics, I want to  
3 mention a few things about the process of reauthorization  
4 which I found illuminating.

5 About a year or a little longer ago, MQSA  
6 reauthorization first came to the fore. As you may recall,  
7 the original statute which was passed in '92 authorized  
8 appropriations for MQSA purposes through fiscal year 1997.  
9 And towards the end of 1997 calendar year, in October of  
10 1997, the Senate acted on reauthorization. This was halfway  
11 through that particular Congress, which is just now coming  
12 to a close, and they passed a reauthorization bill in the  
13 Senate which had relatively few changes, and those were  
14 minor and technical changes to the original statute.

15 The House, on the other hand, had not acted by  
16 that time and, in fact, really began its activity in the  
17 spring of this year. They had hearings last summer. This  
18 was before the Subcommittee on Health and Environment of the  
19 House Commerce Committee, and these hearings took place, as  
20 I said, in the summer, and there were subsequent discussions  
21 at the Commerce Committee level. There was a vote at the  
22 committee level, and then ultimately there was a vote in the  
23 House as a whole. And the House passed this House-based  
24 version of the MQSA Reauthorization Act almost unanimously.  
25 There was one dissenting vote.

1           However, this left us in the situation where we  
2           had different bills passed by the different Houses of  
3           Congress, and that situation needed to be reconciled. This  
4           happened in the waning moments of this Congress as we were  
5           approaching and passing the 1st of October and as Congress  
6           was interested in getting out of town to campaign for the  
7           election, which is today.

8           As it happens, the Senate decided to take an  
9           expeditious approach and passed the most recently passed  
10          House version of the bill by unanimous consent, and so then  
11          all of the parts of Congress had agreed on the same  
12          language, and that bill then went to the President for  
13          signature and was, indeed, signed a few weeks later, and  
14          that only some few weeks ago.

15          So we now have MQSA reauthorized, and I think  
16          aside from learning a bit of civics that I somehow must have  
17          missed in high school and college during this process--and  
18          it's frankly more complicated than I appreciated--I think  
19          the most interesting aspect was the unanimity of support of  
20          all of the parties who testified before the House Commerce  
21          Committee's subcommittee, which is where the hearings were  
22          held, their support in terms of MQSA and its basic approach  
23          and their praise for what the agency and the states and the  
24          facilities and the committee and so forth have done up to  
25          this point with respect to MQSA.

1           There were people testifying both from FDA and  
2 from the General Accounting Office, but also from several  
3 consumer-related organizations as well as the American  
4 Cancer Society, the American College of Radiology, and so  
5 on. There was quite unanimous support for the  
6 reauthorization bill as a whole.

7           There was some debate, if you will, over some  
8 difference of opinion on some of the specific points that  
9 were in the proposed legislation on the House side, and,  
10 indeed, there was some debate amongst the members of the  
11 House Commerce Committee about certain of the provisions,  
12 and we can touch on that in a moment. But I did want to  
13 mention what had happened and also mention in particular the  
14 very broad support that the program has from the Members of  
15 Congress generally and from the people who testified at the  
16 committee hearings.

17           [Slide.]

18           You have been given a copy of a document which I  
19 guess would be fair to call MQSA as amended. The MQSRA, the  
20 Mammography Quality Standards Reauthorization Act of 1998,  
21 in fact, consists of a set of amendments to the original  
22 statute, and what we have done is to take those amendments  
23 and to fold them into the original statute, the MQSA of '92,  
24 so that you have what is, in effect, an amended version of  
25 that original act.

1           In due course, and I'm sure with all deliberate  
2 speed, we will get an official version of that from  
3 Congress, but that has not yet been forthcoming, so I  
4 apologize in advance if there's any confusion attendant to  
5 the way we undertook to put the two documents together. But  
6 I think what you have essentially is the Mammography Quality  
7 Standards Act, that is, as it now exists, and that includes  
8 all of those amendments.

9           The act was in effect or has been in effect since  
10 it was signed by the President. One of the things that I'll  
11 get to in a moment is a situation in which even though the  
12 statute doesn't contain any language indicating when a  
13 particular aspect of the act will be effective, the House,  
14 in putting forward the bill, also put forward what's called  
15 the House report or bill report, and this is fairly typical.  
16 And you can't have reports on both sides, as was the case  
17 with the original MQSA. But in this case, we have a bill  
18 report from the House which indicates the sense of the  
19 Congress in terms of what they meant by some of the things  
20 that they said in MQSRA, and this is particularly  
21 significant with respect to one provision that I'll get to  
22 in a moment.

23           But I just wanted this morning to talk about some  
24 of the more significant aspects of the reauthorization  
25 legislation, certainly not talk about all of the details.

1 As you can see on this slide, there were a number  
2 of technical corrections and minor amendments that certainly  
3 may have some effect on the clarity of the act and so forth  
4 on some minor points. But I just wanted to go through four  
5 or five things this morning that seemed particularly  
6 significant.

7 One, which may be of significance mostly to me, is  
8 the fact that the reauthorization was through '02. The  
9 original authorization was from '92 to '97, a five-year  
10 authorization, which is fairly typical, and when the House  
11 and the Senate redid the bill, they just changed the 1997 to  
12 2002, an additional five years. On the other hand, of  
13 course, we had already lost a year, if you will, in between  
14 '97 and '98, so we really are facing reauthorization again  
15 in four years, and so I would expect that we will have not  
16 this coming Congress that will be coming in momentarily, but  
17 the Congress after that, two years down the road, will be  
18 asked to deal with the reauthorization of MQSA again. And  
19 that will take place towards the end of that Congress, as it  
20 did this time.

21 The second point that I wanted to mention was  
22 there was a significant change in the section with respect  
23 to accreditation standards, and that was to insert into the  
24 act a new term of art and a new personnel category, if you  
25 will. And this is a group called reviewing physicians.

1 These are individuals who are employed by accrediting bodies  
2 to do the clinical image review that's part of the  
3 accreditation process, as you know. And the new definition  
4 says in part that these reviewing physicians will be  
5 physicians as prescribed by the Secretary in the existing  
6 part of the statute who meet such additional requirements as  
7 may be established by an accrediting body and approved by  
8 the Secretary.

9 As you read that, you'll see that there's a little  
10 bit more detail there, but basically we're talking about the  
11 fact that now under the reauthorized MQSA accreditation  
12 bodies can establish additional requirements with respect to  
13 their reviewing physicians. They certainly must be  
14 interpreting physicians under the act, but they can now  
15 impose additional requirements, presuming that those are  
16 approved by the Secretary.

17 In addition, there are some amendments to the  
18 statute which clarify some of the responsibilities of  
19 facilities under the statute, and in particular with respect  
20 to the issue of retaining the mammograms as part of the  
21 patient's medical record. There certainly is continuing to  
22 be in the statute the language with respect to the length of  
23 time that the mammograms must be retained; but in addition  
24 to that, there is clarifying language that makes more  
25 explicit the fact that these mammograms--or that the

1 facilities must, upon the request or on behalf of the  
2 patient, transfer the mammograms to a medical institution or  
3 a physician or to the patient directly.

4           There had been--I think there was clear basis for  
5 interpreting that that was the intent of the original  
6 statute, but this clarification certainly makes it much  
7 clearer to facilities that they have that responsibility and  
8 that the patients have a right to access to their  
9 mammograms, and we hope that that's going to certainly ease  
10 the difficulties that have been reported by some in terms of  
11 having facilities transfer films in a timely fashion and at  
12 a reasonable cost.

13           [Slide.]

14           Probably the last two items I wanted to mention  
15 were the most significant changes in the statute, the first  
16 being very significant to facilities and patients, and the  
17 second being of most significance to the FDA at the moment.  
18 The first item is the direct report to patients, and this  
19 was alluded to yesterday. In addition to the requirement  
20 that existed in MQSA previously, in addition to the  
21 mammography report being provided to any referring physician  
22 or to the self-referred patient if in that case there is no  
23 physician, the reauthorized MQSA requires that for each  
24 patient, be they self-referred or referred, for each patient  
25 a summary of the written report, a summary of the

1 mammography report shall be sent directly to the patients in  
2 terms easily understood by the patient.

3           We got into some discussion of that yesterday on  
4 some of the implications of that. But that's certainly a  
5 very significant change for facilities as well as for  
6 patients. It in my view represents, in effect, an expansion  
7 of the practice that the facilities would have had already  
8 with respect to how they interrelated with their self-  
9 referred patients. But now all patients are going to be  
10 getting a copy of this lay summary of the medical report or  
11 mammography report directly from the mammography facility as  
12 opposed to previously where they would have gotten their  
13 information in the large proportion of cases through the  
14 agency or the referring physician.

15           Finally, the MQSRA called for a demonstration  
16 program with respect to inspections. The intent of this  
17 program is to determine whether or not there is a set of  
18 selection criteria that the agency could use to select  
19 facilities that might be inspected less often than annually  
20 and still provide the same assurance of quality that's  
21 provided currently by the mandated annual inspection. The  
22 motivation I think for this is the fact that when we first  
23 started inspections under MQSA, even in the initial year, we  
24 had about 30, 35 percent of facilities with no findings  
25 inspections. That's grown now to probably 60, possibly 65

1 percent of facilities with no findings inspections.

2           While we might expect reasonably for that number  
3 to go down when the final regulations go into place, I think  
4 it would be reasonable to suppose on the basis of past  
5 experience that we would in the succeeding two years or so  
6 get back to about where we are today. And people have  
7 raised the not unreasonable question about what value is  
8 added by continuing to inspect facilities and continuing to  
9 establish on an annual basis that there are no problems.  
10 And so that brings up the obvious question of can you re-  
11 establish that there are no problems in those facilities on  
12 a less-than-annual basis and thereby still provide assurance  
13 of quality.

14           So there was this call in the MQSRA for a  
15 demonstration program regarding the frequency of inspection,  
16 so the Secretary is due to establish that demonstration  
17 program with selected facilities who would be inspected less  
18 often than annually, I presume biennially, and then  
19 establish whether there are a set of selection criteria that  
20 will work.

21           The statutes says, interestingly enough, that this  
22 is not to begin before April 1st of 2001. We had spoken  
23 directly with House staff and made the point that the final  
24 regulations are going into effect April 28th of '99, that we  
25 felt that facilities needed to have about a year to get

1 comfortable with all of the requirements so everybody could  
2 have had an inspection under the final regulations before  
3 anything began, then we could use the inspections that would  
4 begin in April of 2000, and for that succeeding 12 months  
5 as, if you will, a baseline year, and we could, in fact, use  
6 performance in that baseline year as one of the possibly  
7 several criteria that might be used to select facilities for  
8 participation in the demonstration program.

9           So the first year--and we haven't designed the  
10 program yet, so I'm being a little speculative, but  
11 presumably the first year in which some facilities in the  
12 demonstration project wouldn't have an inspection would be  
13 the 12 months beginning April of 2001. The presumption then  
14 would be in the following 12-month period everybody would be  
15 inspected again, and you'd look at the results and you'd see  
16 were the results any different for facilities that were in a  
17 certain category, met whatever the selection criteria are  
18 that you're considering, who did get an annual inspection  
19 every year, were they any different from the facilities who  
20 didn't get an annual inspection in one of those years. And  
21 if you establish that there wasn't any difference, then  
22 presumably you've established that going to a biennial  
23 inspection for that group of facilities isn't going to have  
24 a cost in terms of reducing your assurance of quality.

25           We have a lot of work to do, as you might expect,

1 in terms of designing the demonstration program. We've  
2 begun some preliminary internal discussions on those points,  
3 and those will be going on for a fair while, I think. And  
4 as you might expect, there are a fair number of hurdles to  
5 be gotten over in terms of designing a study that will  
6 actually answer the question we want to answer. So I don't  
7 expect to see anything substantive in terms of a plan for  
8 some while, but presumably we'll be back at a future  
9 occasion to let you know where we are on that.

10 That was basically all I wanted to talk about this  
11 morning unless you have any questions about the  
12 reauthorization act that you'd like to raise.

13 DR. MONSEES: Thank you for your presentation.

14 I neglected to point out--and you probably all  
15 know, and it's written on the agenda--that Mr. McCrohan is  
16 the Director of the Division of Mammography Quality and  
17 Radiation Programs. And I'll take questions now pertaining  
18 to this, or if you would, any other general questions.

19 MR. McCROHAN: Sure.

20 DR. MONSEES: Anybody from the panel who has a  
21 question? Yes?

22 DR. NISHIKAWA: John, in terms of patients getting  
23 access to their mammographies, does that imply they have the  
24 right to their original mammograms or copies of their  
25 mammograms?

1 MR. McCROHAN: The originals. At least that's the  
2 way we're interpreting the language, and I think it's the  
3 reasonable interpretation.

4 DR. MONSEES: Okay. Good question. Any other  
5 questions?

6 [No response.]

7 DR. MONSEES: Thank you very much.

8 Okay. We'll move on to an update on states as  
9 certifiers by Ruth Fischer, who is the chief of the  
10 Mammography Standards Branch.

11 MS. FISCHER: Good morning. The update that I  
12 would like to tell you about today is what is happening with  
13 our demonstration project.

14 [Slide.]

15 It began in August of this year, and it runs  
16 through August of next year.

17 [Slide.]

18 And the participating states that were selected  
19 for this program were Iowa and Illinois. We've now finished  
20 the first quarter of operation, and as you might expect,  
21 start-up in something that's brand new is the most difficult  
22 time. We're also looking to the demonstration project to  
23 bring us answers to problems so that when the regulatory  
24 program finally begins, which we anticipate in two years,  
25 many of the kinks will be worked out. So I think in that

1 respect it's good we're having some problems because we're  
2 learning from it.

3 [Slide.]

4 I'd like to go over the application process that  
5 we used. It was in two phases. I believe that I talked to  
6 you about these areas the last time I spoke to you and when  
7 I did an orientation for new members, and this has not  
8 changed. This is the documentation area in the written  
9 application process. What I'd like to tell you about in  
10 technical staffing and training is that we added a category  
11 dealing with information systems personnel. Probably one of  
12 the--the most critical operational element that we're  
13 looking at is electronic data transmission. So we are  
14 requiring that the states do have designated information  
15 systems, people on staff to assist with this.

16 Also included in technical staffing and training  
17 are consultants who will deal with mammography practice  
18 concerns, and that means clinical issues. So, therefore,  
19 the states had to provide us with qualified MQSA physicians  
20 and medical physicists that could be used as consultants,  
21 and I would say that in both instances, the caliber of those  
22 physicians certainly exceeds that of just meeting the MQSA  
23 requirements.

24 [Slide.]

25 Phase 2 is the actual testing of the information

1 systems. I think what we learned from this is, according to  
2 our computer folks, the transfer of data is relatively  
3 simple. However, that's the computer folks talking, and  
4 it's, by and large, the program people who are actually  
5 doing the transmission. So although we found that the  
6 systems worked, the implementation of it became more  
7 complicated.

8           What we would like to do next year when we reopen  
9 this again is to actually have instruction and testing with  
10 the personnel who are going to actually be using it on a  
11 daily basis, and that would be program people.

12           [Slide.]

13           We're evaluating the program according to  
14 performance-based criteria. Therefore, we're looking for  
15 results, outcomes. And the process by which they are  
16 achieved is not as important to us as the end result. And  
17 we have three categories for evaluating each of the  
18 performance indicators that were on the application. We  
19 will be doing an evaluation later this month to take a look  
20 at what's gone on in the first quarter. It will not be  
21 every single item because some of the time frames don't kick  
22 in until four months into the program and so forth. But  
23 whatever is applicable to date we'll be looking at, and  
24 we'll use that to work with the states if there are any  
25 categories that are not straight satisfactories.

1 [Slide.]

2 This is looking at some of the issues that we will  
3 be evaluating, and it is, again, how are they doing on the  
4 way to completing facility inspections annually; how are  
5 they handling inspections which might have to be deferred  
6 for one reason or another, how are they rescheduled; the  
7 timely resolution of the findings that the inspection itself  
8 is complete and well documented; follow-up inspections are  
9 conducted for appropriate reasons; that there's appropriate  
10 and prompt enforcement; and that all the issues surrounding  
11 inspector quality assurance which we have in place for MQSA,  
12 our own MQSA inspectors, are met with the states'  
13 inspectors.

14 [Slide.]

15 Finally, in certification program areas, we'll be  
16 looking to make sure that whatever the accreditation body  
17 transmits as the appropriate status of a facility is  
18 reflected in the appropriate type of certificate; that the  
19 certificates are mailed in a timely manner. We presently  
20 use a two-week standard to make sure that from the time that  
21 we get data that the certificate is printed and sent out.  
22 Often we can do it in less, but that's what we--the  
23 parameters that we also gave to the states. We will be  
24 looking to see, if anything has been done in the suspension  
25 and withdrawal area, that it was done according to

1 appropriate criteria; that there's prompt investigation and  
2 action, and particularly for facilities who may be operating  
3 without a certificate. Certainly in this area, the states  
4 are very close to the situation and can spot this. And when  
5 you were talking about patient notification and that being  
6 prompt, I would fully expect from our past experience that  
7 those facilities which might be of most problem will be  
8 targeted quickly under the states as certifiers program.

9           Also, we'll be looking to see how inquiries about  
10 the program are handled. We have a hot-line right now which  
11 we use to field volumes of calls, and we still have a great  
12 number of calls that come in directly to the division that  
13 we answer. So we'll be looking to see what the parallel  
14 system is in the states and that there are appropriate  
15 appeals processes.

16           These last two slides, again, are evaluation  
17 criteria that there are definite guidelines to the states  
18 for what is timely, what is an appropriate process and so  
19 forth.

20           We anticipate that a notice for the second year of  
21 the demonstration program will go out later this month or by  
22 mid-December.

23           DR. MONSEES: Thank you.

24           Do we have any questions? Yes, Dr. Dempsey?

25           DR. DEMPSEY: Ruth, at the outset, you mentioned

1 that you did encounter some problems?

2 MS. FISCHER: The problems are primarily  
3 electronic data transmissions and understanding what we  
4 meant by closing out a report. For example, if the ACR  
5 transmits us data about the status of a facility and then  
6 the states taps in and is able to get that data immediately,  
7 when they mail the certificate, at first they didn't  
8 understand that they were supposed to send back a date when  
9 they also did that. So there was just some confusion about  
10 what we wanted feedback on.

11 DR. DEMPSEY: So the problems were really data  
12 transfer problems?

13 MS. FISCHER: So far.

14 DR. DEMPSEY: The other thing is you had mentioned  
15 in your presentation that process was not as important as  
16 the end result. Are there efficiency parameters,  
17 nevertheless, that you look at? Because you could get an  
18 end result but have it take twice as long.

19 MS. FISCHER: Well, I think that would be covered  
20 under the times in which we asked for resolution of  
21 inspection findings, the times in which certificates must go  
22 out, the times in which data is uploaded to us.

23 DR. DEMPSEY: So there are time limits internally.

24 MS. FISCHER: Yes. And that's one of the ways we  
25 can actually do some quantitative evaluation, because we

1 have these.

2 Yes, Mike?

3 MR. MOBLEY: Ruth, you talk about it being  
4 performance-based and everything, but then you're--and I'm  
5 as guilty as anyone. But you're measuring these kinds of  
6 things like time and how fast somebody does something and  
7 the quantity or percentage or whatever. One of the things I  
8 wondered about here is that in doing this, and particularly  
9 allow states to take over a program, there's the potential  
10 that there may be some new mechanism developed or a new  
11 process developed that enhances a program. And I'm  
12 wondering, is there anything in place or has anybody thought  
13 about putting in place something that looks at after a  
14 period of time, a couple of years or whatever, a state has  
15 been running its program, do we see better quality images,  
16 lower doses, better delivery of the services?

17 That's the real performance indicator in my mind.  
18 That's the absolute performance indicator, if we have a  
19 better product delivered to the consumer as an end result.  
20 And I don't see anything here that captures that.

21 MS. FISCHER: I think that certainly the  
22 indicators that we used for this first year were, you know,  
23 the best we could generate in the amount of time that we  
24 had. Certainly the point of the program is to note keep  
25 this cast in stone, but to reflect where we should be going

1 and what we're learning. And certainly I think that what  
2 you brought is very important.

3 I think the less tangible parts of the program are  
4 those things that deal with the resolution of findings, the  
5 facilities operating without certificates, what happens when  
6 the states need to go to their physician or medical  
7 physicist to resolve some clinical issues. And to date, we  
8 just don't have any experience in that yet. I would assume  
9 that over the course of two years in a demonstration project  
10 those issues will come up. So this is just our first-year  
11 model.

12 MR. MOBLEY: Well, I threw out the broad question  
13 first. Now I'll target my question.

14 MS. FISCHER: Don't give me a hard time.

15 MR. MOBLEY: No, no, not at all.

16 One of the experiences the states have had in a  
17 number of different programs is that when the feds are doing  
18 their part, they do their thing as they do it; and then when  
19 we attempt to do our part, we're held to a higher standard,  
20 sometimes a significantly higher standard.

21 Is that the case here?

22 MS. FISCHER: Absolutely not. Let me tell you a  
23 little story about that.

24 We learned from the Nuclear Regulatory Commission  
25 that that was precisely what happened with their agreement

1 state program, and the GAO ripped them to pieces over  
2 evaluating themselves one way and evaluating the agreement  
3 states another way. First of all, scientifically, you  
4 cannot conduct an evaluation that has any validity by  
5 comparing apples and oranges.

6 Interestingly enough, four and a half years ago,  
7 when I first came to the government, we saw all these  
8 findings, and I was talking about, well, we really need a  
9 program where we're evaluating ourselves exactly as we are  
10 the states. And someone said to me, well, we don't do that;  
11 you haven't been in government long enough.

12 But with the progressive leadership we presently  
13 have, we certainly are going to look at all the  
14 characteristics of our own program the same way, and then  
15 also by doing that, we can adjust the degrees of what we're  
16 looking at. Perhaps time frames might be adjusted, or  
17 percentages adjusted, or, you know, so we will be looking at  
18 both.

19 MR. MOBLEY: Thank you.

20 DR. MONSEES: Yes, Dr. Sickles?

21 DR. SICKLES: You mentioned this is a two-year  
22 demonstration project. In the second year, will you be  
23 expanding to have more states, or will you just keep with  
24 the two that you now have?

25 MS. FISCHER: Depending on the performance at the

1 end of the year of Iowa and Illinois, they can opt to renew.  
2 We will also open it to new states. However, I don't have a  
3 ny kind of indication as to what the interest or response is  
4 to coming in, you know, for the second year.

5 MS. BROWN-DAVIS: Ruth, in your presentation, you  
6 mentioned--or there seemed to be some correlation between  
7 the state certification program and patient notification,  
8 some correlation in your mind. Is that correct? And so I'm  
9 wondering if your expectations are--what are your  
10 expectations around patient notification as it relates to  
11 the states? And if, in fact, there is that correlation,  
12 what--it sounds as if the horse may be--or the cart may be  
13 before the horse for some. I'm just not clear on exactly  
14 what that relationship is.

15 MS. FISCHER: Patient notification is probably the  
16 most extreme of enforcement actions. I mean, you know, it's  
17 something that would not be entered into without the utmost  
18 seriousness.

19 The states are required to be able to have a  
20 process to do this should it be necessary, and my point was  
21 that the states very much know their good and bad players.  
22 And they may be quicker than we are to identify a really  
23 problem facility, and if it should bear out, it could be  
24 that action might occur sooner rather than later.

25 MS. BROWN-DAVIS: Well, now, do the states have a

1 time frame? I mean, as you're certifying, is there a stated  
2 time frame for the states to let patients know that there's  
3 a problem?

4 MS. FISCHER: No.

5 MS. BROWN-DAVIS: Do you know specifically how the  
6 language is written? Do you remember?

7 MS. FISCHER: It's not--this goes back to  
8 yesterday's discussion in which what is called for in the  
9 regulations, in the final regulations, is that this  
10 mechanism is in place, but just as yesterday's discussion  
11 didn't resolve anything about the time in which it occurs,  
12 neither does this.

13 MS. BROWN-DAVIS: Thank you.

14 DR. MONSEES: Any other questions?

15 [No response.]

16 DR. MONSEES: Thank you very much.

17 MS. FISCHER: Thank you.

18 **Voluntary Stereotactic Accreditation Programs - Update**

19 DR. MONSEES: We'll move on. The next topic is  
20 voluntary stereotactic accreditation programs. The update  
21 will be given by Pamela Wilcox-Buchalla, Senior Director of  
22 Accreditation Programs, American College of Radiology.

23 Do we have a representative from the American  
24 College of Surgeons?

25 MS. WILCOX-BUCHALLA: Apparently not. I had

1 understood that Dr. Winchester was going to be here to speak  
2 to their issues, but he's not here.

3 DR. MONSEES: Okay. Why don't you proceed?

4 DR. FINDER: I was under a different impression,  
5 that you two had worked it out that you were going to  
6 present both sides.

7 MS. WILCOX-BUCHALLA: Well, I can do that. I have  
8 the information, but I was not aware that he was not going  
9 to be here. I had hoped he was going to have some more  
10 current information, something new that I don't have, and  
11 I'll tell you about that. They are working on a survey, and  
12 I had understood he was going to have some preliminary  
13 results from their survey when he was here.

14 I was interested to see that Dr. Finder gave me  
15 half an hour on the agenda for what he told me was going to  
16 be a five-minute update. So I'm prepared to be somewhere in  
17 between 5 and 30 minutes.

18 [Laughter.]

19 DR. FINDER: We wanted to give you flexibility.

20 MS. WILCOX-BUCHALLA: I love it. You know, the  
21 FDA is really good at that. Isn't that what the "f" stands  
22 for?

23 I'll start talking about the ACR program and where  
24 we are today. Interestingly enough, the universe being much  
25 smaller, meaning that we have about 2,500 to 3,000 units

1 across the country, percentage-wise we're probably at about  
2 the same place with stereo that we were with mammography  
3 this far into the program, being a year and a half. That's  
4 the good news. The bad news is that if we only have 13  
5 months to get the rest of the facilities in the program,  
6 it's going to be very difficult.

7           At this point we have 385 facilities with 390  
8 units that have applied for accreditation, so that's about  
9 13 percent of the universe. Total facilities accredited is  
10 289. The initial deficiency rate is slightly higher than  
11 what we saw in mammography when it first began in '87,  
12 initial deficiencies of about 42 percent. So for those of  
13 you who may be confused about terminology, when we say  
14 initial deficiency, that's when a facility applies, may have  
15 problems with either clinical images, phantom dose, et  
16 cetera, and then they still have an opportunity to correct  
17 problems, reapply, and if they don't pass on that second  
18 attempt, that's when we consider it a failure. And in  
19 mammography, under the law, when they fail they have to  
20 cease operating. Obviously, under the voluntary program,  
21 that's not true. But we're still requiring the same kinds  
22 of action, detailed corrective action and resubmission.

23           The repeat, for those that have had a deficiency  
24 initially and then reapply after corrective action, we're  
25 seeing a deficiency rate of about 17 percent or a failure

1 rate of 17 percent, which is, again, very comparable to what  
2 we've seen in mammography all along.

3 I think one of the issues that will be very  
4 helpful is we are developing and completing a quality  
5 control manual for stereotactic that should be out by the  
6 end of the year, and that will look at issues related to  
7 routine QC, phantom imaging, and dose.

8 Again, another interesting parallel to mammography  
9 is that we are seeing dose failures of about 10 percent,  
10 which is about what we saw with mammo in '87. And I think  
11 that goes back to facilities not doing routine QC, learning  
12 the process, looking at the issues, and getting more  
13 involved with their physicists.

14 Now, why is there not a higher level of  
15 participation? I think that some of the things that pushed  
16 the mammography accreditation program along included  
17 increased emphasis on screening for all women by the Cancer  
18 Society, and, of course, this doesn't have a parallel  
19 process. So we're not getting that community interest, the  
20 media push, the Cancer Society push that would help us get  
21 facilities into process.

22 We have included information on our Web page. The  
23 ACR and the American Cancer Society have included articles  
24 in both of our bulletins multiple times about what the  
25 process is, what the criteria are for physicians, and that

1 if facilities don't participate, it will become mandatory  
2 and regulated in 2000. That really hasn't been very  
3 successful in pushing, so I think we need to look at some  
4 other ways to get people aware of what's going on and get up  
5 the level of participation.

6 One of the other big motivators we had with mammo  
7 was the State of Michigan, which had a very big Cancer  
8 Society screening program in '88 and then passed legislation  
9 in '89 that required facilities. As that went along, again,  
10 media interest really generated facilities' participating in  
11 the accreditation program.

12 One of the other things I have not heard much of  
13 is facilities marketing themselves as accredited, and, of  
14 course, that's always been--that pocket is where people  
15 really get interested in participating in some of these  
16 programs. If their competitors are accredited and women  
17 know to go there, then that's what happens. So we're not  
18 seeing that particular issue either. We need to look at  
19 other avenues. We need the support of the FDA in getting  
20 facilities participating in these programs.

21 I'm not sure, when FDA staffers go out and do  
22 presentations, how much this is discussed. If there's  
23 anything we can do to help with that, we'd be glad to do  
24 that.

25 Finally, the status of the ACR and the American

1 College of Surgeons agreement. As I told you last time, the  
2 agreement has been signed off on. We also now have a  
3 contract with the College of Surgeons to provide services  
4 for accreditation. The way the process will work, I just  
5 met with College of Surgeons staff a couple of weeks ago to  
6 finalize the logistics, and what will happen is that  
7 facilities will apply directly to the College of Surgeons;  
8 they will review the credentials for the physicians. If  
9 they meet the criteria as outlined in our agreement, then  
10 they will forward the application to the ACR, at which point  
11 we'll send them testing materials. We will look at the  
12 credentials for technologists and physicists, their QC  
13 program, and evaluate the clinical and phantom images and  
14 provide the dosimeters.

15           So only the physician qualifications piece will  
16 actually be directly done by the College of Surgeons.  
17 Accreditation will be awarded by the College of Surgeons.  
18 It is not a joint program. They are independent programs,  
19 and that's what our leadership agreed to.

20           The College of Surgeons also sent out a survey  
21 approximately two weeks ago to all of their fellows asking  
22 who's doing stereotactic biopsy, how many units they have,  
23 how many physicians are doing it. And the initial reaction  
24 to that survey is to be generating more interest. Staff  
25 tells me that they've had a number of phone calls from

1 people who are interested in applying as a result of the  
2 survey.

3           The piece that I thought Dr. Winchester was going  
4 to have was whether there were some preliminary results from  
5 the survey about how many surgeons are actually doing this.  
6 And it may be that it's just a little too early to have  
7 those results. But that's going to be an important piece  
8 both for your work in determining whether we're meeting the  
9 requirements to have a significant percentage apply, and  
10 also for us to be able to plan our workload in terms of  
11 being able to do timely review.

12           We have completed revisions to documents so that  
13 the Cancer--I keep saying Cancer Society. I apologize. ACS  
14 is ACS. We tried to get them to call themselves ACOS, but  
15 they didn't like it. So the College of Surgeons will be  
16 mailing applications out to facilities sometime this month,  
17 and we expect to actually be receiving applications back by  
18 the first of the year, and we should be able to move ahead  
19 rapidly in 1999. Hopefully I'll have more information, or  
20 Dr. Winchester will, when you all meet in the spring.

21           Are there questions that I can answer?

22           DR. SICKLES: Two questions. First, if I heard  
23 you correctly, the survey that the College of Surgeons is  
24 doing was sent to fellows? That's not members, that's  
25 fellows.

1 MS. WILCOX-BUCHALLA: Correct.

2 DR. SICKLES: So it's a subset of what's actually  
3 going on.

4 MS. WILCOX-BUCHALLA: Right. They are also going  
5 to send a slightly modified survey to those facilities that  
6 are accredited under the College of Surgeons Cancer  
7 Commission. So that may give us another piece.

8 Interestingly enough, at this point the College of  
9 Surgeons is saying they will only process applications from  
10 people who are fellows of the College of Surgeons. And if  
11 someone wants to apply and is not a fellow, they'll be  
12 encouraged to become a fellow. If they choose not to, they  
13 still have the option to come back to the ACR, and, in fact,  
14 we do have--just last week, we accredited the first surgical  
15 site under the ACR program, Dr. Phillip Israel's facility,  
16 and he is also a liaison to the ACR Stereotactic Committee.

17 DR. SICKLES: Are you aware of the percentage of  
18 College of Surgeons members who are fellows?

19 MS. WILCOX-BUCHALLA: It's very high. No, I  
20 couldn't tell you exactly what it is, but it's very high.

21 DR. SICKLES: Okay. It's not like the ACR where a  
22 much smaller percentage are fellows.

23 MS. WILCOX-BUCHALLA: Right. I don't really have  
24 a handle on what the difference is between a basic member  
25 and a fellow, but I have a sense that it doesn't require the

1 same level of experience and application process that the  
2 ACR's fellowship requires.

3 DR. SICKLES: Okay. I had one other question.  
4 What, if any, developments are there to report in  
5 negotiations that you and the College of Surgeons might have  
6 with third-party payers to tie reimbursement to  
7 certification?

8 MS. WILCOX-BUCHALLA: As of this point, we have  
9 not made any initiatives with any third-party payers about  
10 stereotactic. I think one of the issues was to resolve and  
11 move ahead with the College of Surgeons first. We already  
12 have some relationships for some of our other programs, and  
13 I think it should be a fairly easy tie-in. And we should  
14 move ahead with that. That would certainly be a good way to  
15 get people to participate, wouldn't it?

16 DR. MONSEES: Does the American Cancer Society  
17 maintain an 800 number database for consumers for this, just  
18 like they did for the voluntary accreditation program when  
19 it first began? People could call a number and get the name  
20 of a facility that was accredited under the voluntary  
21 program. Can they do that for this?

22 MS. WILCOX-BUCHALLA: Yes, they can. We provide a  
23 list of those sites that are accredited by ACR, and we will  
24 provide this same list for the College of Surgeons  
25 facilities.

1 I have a sense that women are not as aware because  
2 it's at a point, from a personal perspective, that I think  
3 when a woman is being told that she needs a biopsy, she's  
4 not--she's going to go wherever her physician tells her to  
5 go, and she is less likely to be more assertive about these  
6 issues. And, again, that's a public education issue that we  
7 probably should find some ways to work with the Cancer  
8 Society on.

9 DR. MONSEES: I have one follow-up question, and I  
10 will entertain questions, of course, from the panel. Maybe  
11 we'll fill your time slot.

12 Are most stereo units, do you think, in places  
13 that have mammo units? So, in other words, would it help to  
14 have the inspectors from the FDA, when they go out and do  
15 their annual inspections, comment on the fact that there's  
16 an accreditation program and that if participation isn't  
17 doesn't done on a voluntary basis it will become mandated?  
18 Are most of them housed in centers where there are mammo  
19 units?

20 MS. WILCOX-BUCHALLA: I certainly think for those  
21 that are done by radiologists that's true. I had understood  
22 that FDA was going to look at whether they could encourage  
23 inspectors to do that, and I have heard anecdotally that  
24 some inspectors mention it, particularly--well, Arkansas  
25 requires stereotactic accreditation and Massachusetts will

1 as well. But I have heard some anecdotal reports.

2 We did send applications to all mammography  
3 facilities when the program began about a year and a half  
4 ago. That may not be true at all for surgeons, and that's  
5 one of the pieces of information they're trying to get  
6 through the survey. I think it's unlikely that most  
7 surgical facilities have a mammography unit. I think that  
8 would be unique.

9 MS. BROWN-DAVIS: Can you expand a bit on how you  
10 see the FDA assisting in getting people to participate more  
11 in a voluntary accreditation?

12 MS. WILCOX-BUCHALLA: A couple of ways that they  
13 might do that is, one, a bigger emphasis or an emphasis on  
14 it in the Website, an article in Mammo Matters, and  
15 encouraging or actually perhaps even giving some kind of a  
16 news sheet or PR piece that the inspectors could use when  
17 they go into a site to make facilities aware. I think there  
18 are probably some pretty straightforward things that can be  
19 done, but if they're not done soon, the chances of being  
20 successful--

21 MS. BROWN-DAVIS: Has this been discussed prior  
22 to--

23 MS. WILCOX-BUCHALLA: I believe that we talked  
24 about that the last time, too.

25 MS. BROWN-DAVIS: Okay.

1 DR. MONSEES: Would it be possible to publish  
2 participation figures when we get the survey information,  
3 not wait until the next meeting but get the update from the  
4 American College of Surgeons and put that into the article  
5 so that people are aware of how far behind the voluntary  
6 accreditation program is?

7 MS. WILCOX-BUCHALLA: Sure.

8 DR. MONSEES: And understand how compelling the  
9 reason might be to get as far forward as possible. I'd love  
10 to see that.

11 DR. DEMPSEY: Pam, on the dosimetry failures, the  
12 percentage again was?

13 MS. WILCOX-BUCHALLA: Ten percent of the failures  
14 included dose failures.

15 DR. DEMPSEY: Dose failures. Were they digital  
16 machines or analogs?

17 MS. WILCOX-BUCHALLA: Mostly digitals.

18 DR. DEMPSEY: The second question is to Dr.  
19 Finder. Given the fact that there is now a signed agreement  
20 between the ACR and the ACS and an initiative is, if you  
21 will, off the ground, has the FDA stated any specific target  
22 goals in terms of dates or percentage participation that  
23 they will require before looking at mandatory regulation?

24 DR. FINDER: As you might remember from the last  
25 meeting that we tried to get some dates and numbers set

1 down, there was no consensus as to the exact number or date.  
2 Now, we are trying to encourage in as many ways as possible  
3 and are looking for all different ways to encourage  
4 participation in this program. Again, we feel that at this  
5 point, the voluntary program is still the way to go as long  
6 as we can get enough participation rather than promulgate  
7 regulations.

8           However, we are prepared to go down that pathway  
9 if necessary. I think some of the suggestions that have  
10 been brought up were brought up last time, too, and some of  
11 them have been tried and have not been as successful as one  
12 would like. But that doesn't mean that they still won't  
13 succeed given enough time.

14           I think it requires that the underlying basis be  
15 established. ACR and ACS have finally got their program  
16 set, and I think that we'll see more participation as time  
17 goes on. But the FDA is committed to this process. In  
18 fact, at RSNA we plan to make a presentation--well, part of  
19 our presentation is about this or will be about this to  
20 encourage facilities to do this.

21           DR. MONSEES: How about also having the  
22 manufacturers perhaps send out and encourage participation  
23 in the voluntary accreditation program? Is there any  
24 precedent for that, do you know?

25           MS. WILCOX-BUCHALLA: I'm not aware of any

1 precedent. You know, perhaps if the request or the emphasis  
2 came from NMQAAC from FDA, that might be helpful.

3 DR. PIZZUTIELLO: My experience is with  
4 facilities, and what facilities get the most uptight about  
5 is inspections. It brings back, I think, memories of high  
6 school and college final exams for most people, and  
7 everybody likes to avoid those. They get nervous about it.  
8 And I think it would be very effective if the inspectors  
9 were able to say to facilities: I know how much you love me  
10 coming and interrupting your day and taking your time to do  
11 this; if you have a stereotactic unit and the numbers don't  
12 come up to where we need them to be, then you can probably  
13 expect to see me twice as often, and I'm sure you'll really  
14 relish that; if you don't want to see me that often, then I  
15 encourage you to get the message here.

16 The other thing that occurred to me was you drive  
17 along the streets of many little small towns, and they'll  
18 have United Way Giving Fund or something like that, and they  
19 have this target of, you know, X hundred thousand dollars  
20 they have to raise, and the level goes up like in a  
21 thermometer. And that might be something that the FDA could  
22 publish, maybe just a little blip in Mammography Matters  
23 regularly to remind people that we have a long way to go and  
24 that we have a target of whatever the time is, 2000, and I  
25 think those two methods would help.

1 DR. MONSEES: Did you want to make a comment first  
2 before the next question?

3 MS. WILCOX-BUCHALLA: Well, one other avenue that  
4 might be successful in getting some attention might be the  
5 Society of Breast Imaging, and they have done, I think, at  
6 least one short article, but perhaps some of the panel  
7 members are active in SBI and could work on that issue.

8 DR. MONSEES: Again, the inspectors and the  
9 Society of Breast Imaging and the RSNA are all targeted at  
10 radiologists, not really at surgeons.

11 MS. WILCOX-BUCHALLA: Right.

12 DR. MONSEES: We need to hear the surgical piece.  
13 Yes?

14 MR. MOBLEY: Several comments and maybe a question  
15 or two. I remember our meeting--I believe it was my first  
16 meeting with this group--when we discussed this, and we had,  
17 I think, a fairly significant discussion. At least I know I  
18 had some very specific concerns about this voluntary effort  
19 and not having some rather explicit goals that the voluntary  
20 group that were trying to do this could work toward. And as  
21 I remember--and I can't tell you what those goals were at  
22 the time, but as I remember, I stated some explicit  
23 expectations on my part, and I don't think the committee  
24 agreed with that necessarily. But I guess that's certainly  
25 out there, and I think it should be a driver, as a minimum.

1 And I will go back and review those and see where we stand  
2 at this point in time.

3 I'm a little concerned--and, Pam you didn't say  
4 this; I'm saying this. But I'm a little concerned that we  
5 as a committee and that FDA has pushed these entities to  
6 develop this voluntary program, and it seems like that we're  
7 not doing our part in supporting the effort. And I think  
8 that FDA needs to look at what it is that they're doing and  
9 pull all of their different entities--I mean, MQSA is just a  
10 small part of FDA. There's all kinds of initiatives ongoing  
11 within FDA that I think could be brought to bear to deal  
12 with this issue and make it a broader issue with the public  
13 and with the various physician specialties.

14 Now to the questions. You mentioned that the  
15 College of Surgeons was going to award the accreditation  
16 for--and I may not be using the right term there, but the  
17 accreditation for their personnel, but that you are doing,  
18 the ACR is doing the evaluation of the facilities, the  
19 operation, et cetera.

20 In your agreement with them, is there some  
21 methodology or requirement that says that you have to issue  
22 the approval for the facility before they can issue the  
23 accreditation for that facility?

24 MS. WILCOX-BUCHALLA: It's actually very much a  
25 subcontract, Mike, and what will happen is, if based on

1 documents submitted to them the physician meets the criteria  
2 in our joint agreement, then we do the rest of the process.  
3 And although we will actually do the evaluation and issue  
4 the report, the report will come from the American College  
5 of Surgeons. It will have American College of Surgeons'  
6 names and logos on it, but it's actually our evaluation.  
7 And then we'll provide back to the College of Surgeons those  
8 results, copies of actual individual reports as well as  
9 aggregate data on the success or deficiency rates for their  
10 sites.

11 So it's exactly the same as our process, but it's  
12 like we do for California. We review their clinical images,  
13 but the accreditation comes from California. We're  
14 reviewing everything in stereo except physician credentials  
15 for the College of Surgeons, but the accreditation is from  
16 the College of Surgeons.

17 Does that make sense?

18 MR. MOBLEY: Yes, that makes sense. But I'm going  
19 to bore in here because I--I mean, I believe that your  
20 process is accepted. You know, you've been through this.  
21 It's been accepted by the FDA. I'm just a little concerned  
22 that maybe you go through that entire process--and I'm not  
23 saying this--I'd certainly welcome a surgeon to jump in here  
24 or a representative of the College of Surgeons to jump in  
25 here. But I just have to resolve this issue in my mind.

1           You go through your process, and you find that the  
2 facility is deficient. And then the College of Surgeons  
3 looks at it through their process, and they say, oh, we got  
4 a good physician here, he knows what he's doing, he's a good  
5 surgeon, and we're not sure about whether ACR knows what  
6 they're doing or not. But just because he failed here and  
7 his images aren't adequate, we're going to approve him,  
8 anyway.

9           What precludes that from happening?

10          MS. WILCOX-BUCHALLA: The way the contract is  
11 written, any appeal relative to the portions that we  
12 perform--clinical image review, phantom, dose--comes to us.  
13 The facility physician can write to the College of Surgeons  
14 and request the appeal, but we've been recognized via the  
15 contract as the experts in that area. So we will be holding  
16 them to the same standards we hold anybody else to.

17          MR. MOBLEY: All right. So the standard is the  
18 same; the appeals process is the same. It just goes through  
19 here as an administrative function.

20          MS. WILCOX-BUCHALLA: Right.

21          MR. MOBLEY: Okay. Thank you.

22          MS. WILCOX-BUCHALLA: Both organizations have  
23 policies that preclude joint accreditation programs, and so  
24 that's why it's really a subcontract basis. But it doesn't  
25 change the standards in any way.

1 MR. MOBLEY: And I don't have a problem with that  
2 at all. I just wanted to make sure how it worked, and that  
3 sounds fine.

4 MS. WILCOX-BUCHALLA: Can I ask Mike a question?

5 DR. MONSEES: Please.

6 MS. WILCOX-BUCHALLA: Is there some role that  
7 CRCBD could play in this? You may not be the absolute  
8 expert person to ask, but you're certainly a leader in that  
9 organization.

10 MR. MOBLEY: That's a good suggestion, and I'm  
11 chagrined that I didn't think about it, but yes. And if you  
12 could send me a draft announcement or something like that,  
13 I'll see that it gets in the newsletter. We could also have  
14 something at the annual meeting in May talking about the  
15 issue, too.

16 MS. WILCOX-BUCHALLA: I'm sure we'd be happy to  
17 provide somebody to go talk about the issue, since I'm  
18 usually there anyway.

19 MR. MOBLEY: Thanks. Yes.

20 DR. MONSEES: Do we have any other questions of  
21 Ms. Buchalla?

22 [No response.]

23 DR. MONSEES: Thank you very much--do you want to  
24 ask a question of Ms. Buchalla? Why don't you come to the  
25 microphone, please?

1 MS. DiPALERMO: DiPalermo, Siemens Medical  
2 Systems. I have a question concerning training of  
3 physicians, either surgeons or radiologists. Will there be  
4 provision for requirements for sites that become training  
5 sites, clinical training sites?

6 DR. MONSEES: This is a question to you, Ms.  
7 Buchalla.

8 MS. WILCOX-BUCHALLA: Thank you so much, Maria.  
9 There's no specific requirements for training sites with the  
10 exception of surgeons who have experience as trainers in  
11 stereotactic biopsy, and that is actually written into the  
12 joint agreement, that there is a pathway for a non-MQSA-  
13 qualified physician to do training in stereotactic. But  
14 that's the only specifics relative to training.

15 Does that answer your question?

16 MS. DiPALERMO: Is that public knowledge?

17 MS. WILCOX-BUCHALLA: Yes. That document has been  
18 published multiple times now, and it's out there.

19 DR. MONSEES: Thank you very much.

20 Before we come off of this subject, I'd like to  
21 just reiterate for the manufacturers in the audience:  
22 Please, you know who your customers are. You know who owns  
23 these units and where they are. We can only do so much. We  
24 would ask for your cooperation if you can communicate with  
25 your customers and let them know that they should

1 participate. Whether this is an update, whether this is on  
2 regular visits to the facilities, we would appreciate this,  
3 and this will help tremendously. Please, bring this back to  
4 your company and let them know that we're asking for your  
5 help in this collaborative effort.

6 Before we--go ahead.

7 DR. FINDER: I'd just like to make an announcement  
8 or a request. One of the purposes of the committee members  
9 is not only to bring this information but also to take  
10 information back to their constituents, and I refer this not  
11 only to the consumer reps but also to the people here who  
12 give lectures and speak at various meetings to emphasize  
13 this point. And I think that we can work from both sides,  
14 and I think the consumer demand for voluntary program  
15 accreditation would go a long way to help increase facility  
16 participation.

17 I also think that some of the people here not only  
18 give lectures before radiologists but also before surgeons,  
19 and, again, anytime that they can make a mention of this--  
20 and if you want to, you can use the Pizzutiello approach  
21 saying that the FDA is in the background and you don't want  
22 to see them too much. We would appreciate it.

23 DR. MONSEES: Now that we've also talked about  
24 interventional procedures a bit, I'd like to hear an update  
25 on what is happening with the regulation of units that are

1 used for breast needle localization and other interventional  
2 procedures that under the current regs do not need  
3 regulation but, in fact, I think the panel stated that we  
4 felt that that should move along. Can you tell us what's  
5 happening with that issue?

6 DR. FINDER: We've done some surveys and gotten  
7 some information about an estimate of the problem out there.  
8 I believe that you've been sent copies of the material that  
9 we've received. It appears that as far as we can tell,  
10 there's not a huge problem out there. There were reported a  
11 few cases of some problems, of minor problems, actually, in  
12 the performance of some of these studies.

13 FDA is still looking at the possibility, the  
14 likelihood of issuing regulation. We have in the works a  
15 notice of proposed regulation, which may be going out fairly  
16 soon, to begin this process. Again, we have to look at it  
17 in great detail. I don't want to say that we're putting it  
18 on the back burner because we really aren't, but right now  
19 our main energies are being focused on getting the final  
20 regulations implemented. We have until April to get all the  
21 various ducks lined up, if you want to use that term,  
22 because that's a deadline that is coming, April 28th. If  
23 facilities don't have the guidance, if they don't have all  
24 these other things in place, they won't know what to do, and  
25 under the law we have to do the inspections. We have to

1 make sure that they're meeting the requirements.

2 I think one of the issues which we've just come up  
3 with in the last few weeks is the business about the patient  
4 communication, which is necessitating rewriting the  
5 regulation regarding that, rewriting guidance, and at the  
6 same time getting out that information to facilities so that  
7 they can implement it. One of the things I'm not sure that  
8 was mentioned was the fact that the law actually goes into  
9 effect when it's signed. So certain portions of the  
10 reauthorization actually went into effect two weeks ago.

11 One of the things that was mentioned in the report  
12 from Congress was that they were giving facilities until the  
13 implementation date of the final regulations to implement  
14 the Patient Communication Act, a portion of the act. So  
15 what we have to do, in fact, one of our Mammography Matters  
16 was supposed to go out a couple of weeks ago. We had to  
17 hold that back and rewrite it to put in the front page that  
18 this is going to be a major change.

19 So we've been involved with trying to get the  
20 final regulations going, but this has not been forgotten, I  
21 can assure you of that, and we are moving ahead on that  
22 process.

23 DR. MONSEES: Where does the notice appear, the  
24 notice for proposed regulations? Is that in the Federal  
25 Register?

1 DR. FINDER: It would appear in the Federal  
2 Register.

3 DR. MONSEES: Thank you.

4 DR. SICKLES: Could you just inform the committee  
5 of the time line that would be involved, assuming that this  
6 becomes a front-burner issue? Just from when you begin  
7 doing it until when it is in force.

8 DR. FINDER: Okay. What you're talking about is  
9 going through the entire process, and it would involve the  
10 notice of proposed regulation, then coming up with  
11 regulation, proposed regulation, having that go out in the  
12 Federal Register and having that go out to the facilities,  
13 with usually a 90-day comment period. Then we'd come back,  
14 take a look at whatever comments we got. We would then  
15 publish a pro--not a proposed but a final regulation, which  
16 would then go into effect probably anywhere from a year to  
17 18 months or so after the publication date. So it's not a  
18 quick process.

19 The other thing that one would assume is that it  
20 would have to come before this committee, at least in its  
21 various stages, probably before the proposal, then after,  
22 just like we did with the final regulations. So it would be  
23 an involved process.

24 DR. SICKLES: So we're talking at best a two- to  
25 three-year time frame?

1 DR. FINDER: I would think so, and that's, again,  
2 as we discussed at the previous meeting, one of the major  
3 reasons for going ahead with the voluntary programs.

4 The other thing you have to remember and take into  
5 account is the fact that this is still a new process for  
6 stereotactic. The voluntary programs are learning a lot,  
7 and what we would hope to do, if we do come out with  
8 regulation, is to take the information that they gained and  
9 incorporate it into the regulations. I think that without  
10 that basis, without their experience, just writing  
11 regulation could get us into a lot of problems because we  
12 might be requiring things that we find out later are not the  
13 correct way to go.

14 So it's a learning process all around, and we  
15 would hope that--again, we're encouraging the voluntary  
16 program as much as reasonable to accomplish the same thing  
17 quicker.

18 DR. MONSEES: When you asked the question, was it  
19 pertaining to stereotactic biopsy or other--

20 DR. SICKLES: No.

21 DR. MONSEES: That's the way I understood it, but  
22 I think the answer was the other. To review, the time line  
23 for that is the same process.

24 DR. FINDER: Still requires the proposal and  
25 everything--

1 DR. SICKLES: Yes, but the FDA has no plans to set  
2 up or even request some kind of voluntary accreditation of  
3 needle localization units.

4 DR. FINDER: That's correct.

5 DR. SICKLES: I mean, that was not the committee's  
6 intent in advising you initially. All the committee was  
7 asking was that the FDA simply make a dictum that they come  
8 under the auspices of MQSA as mammography devices.

9 DR. MONSEES: So it may not require additional--

10 DR. SICKLES: Could you simply make an  
11 administrative decision without having to go through the  
12 full regulation process that--

13 DR. FINDER: No.

14 DR. SICKLES: You can't? I don't know. I'm  
15 asking.

16 DR. FINDER: No. I mean, that would--no. That's  
17 a major change that would affect a large number of  
18 facilities. You cannot just--

19 DR. SICKLES: I thought you just said there are  
20 only a few facilities.

21 DR. FINDER: No, that had problems that we found  
22 out about. There were only a few problems.

23 DR. SICKLES: Do you have a sense for how many  
24 units are out there in the country being used solely for  
25 wire localization purposes? Because units that are used in

1 a dual fashion obviously are already covered under MQSA.

2 DR. FINDER: I believe that in the information  
3 that you were sent out, we got--

4 DR. SICKLES: I never got it.

5 DR. FINDER: You never got it?

6 DR. SICKLES: No.

7 DR. FINDER: Okay. We'll make sure that you do.

8 We did a survey in which we got responses from  
9 several states and a number of units that they felt--and,  
10 again, they don't keep records about this. But the number  
11 of units that were involved that they believe are being used  
12 for needle localizations that are not accredited, some  
13 states were, you know, like 20, 30, something like that. I  
14 believe that the largest number of units that was reported  
15 to us was in Florida, and that may have been as many as 100.  
16 I don't have the specific numbers off the top of my head,  
17 but I can get those to you and I will.

18 DR. MONSEES: Thank you. I fear as the final regs  
19 come along and the people are figuring what to do with their  
20 old equipment that they can't upgrade, they may be turning  
21 them for that use and that the numbers might increase. But  
22 it's something that's obviously just guesswork.

23 Yes?

24 DR. PIZZUTIELLO: If my memory serves correctly,  
25 when the MQSA first became effective in '94, there was sort

1 of a quick blip that came out that said that the division  
2 decided to temporarily exempt interventional procedures,  
3 primarily because there was no accreditation program, and  
4 that was not done without any--with any notice and comment  
5 and all that. Couldn't that decision just be reversed with  
6 the same streamlined process?

7 DR. FINDER: Well, I can't go into the specifics  
8 of how that was exempted, but I don't think it was just a  
9 fiat that FDA came--it had to be proposed, et cetera.  
10 Actually, maybe Mr. Showalter, who was involved in the  
11 process at the time, can go through that.

12 MR. SHOWALTER: Well, actually, it was done by  
13 fiat.

14 [Laughter.]

15 DR. FINDER: I stand corrected.

16 MR. SHOWALTER: However, it was done on September  
17 30, 1994, which was the day before MQSA went into effect and  
18 facilities had to comply. It was done under the authority  
19 to do interim final regulations, and that authority, though,  
20 according to our counsel at the time, only extended to the  
21 initial implementation of the program. There were times  
22 when I tried to use that later on and was denied access to  
23 it. I don't believe that anyone would be sympathetic to the  
24 argument at this point that you could use interim final  
25 rules and go straight to a rule without notice and comment.

1 That wouldn't fly.

2 DR. MONSEES: Thank you for that.

3 DR. DEMPSEY: I think you can probably very  
4 quickly see the profile of instruments that are out there  
5 being used for that purpose, and that is, since the vast  
6 majority of mammography is done as an outpatient, those  
7 instruments are ones that are remaining in hospitals that  
8 really don't do volume mammography anymore to do the pre-  
9 operative needle locs. In other words, that is, one  
10 remaining instrument stays in the hospital only to be used  
11 for pre-operative needle locs rather than take the patient  
12 to the outpatient facility and then to the hospital. That's  
13 probably where they all are, I would surmise.

14 DR. MONSEES: Okay. Last comment here?

15 DR. PIZZUTIELLO: It might not be that simple to  
16 fold these units into the accreditation program. Just a  
17 reminder that the accreditation program was really based  
18 originally on a screening population, and these are very  
19 select populations who were used strictly for the needle  
20 locs. So getting the patients that fit the criteria to  
21 submit to accreditation and so on might not be as trivial as  
22 people think, so let's remember that when you work on the  
23 regs for that to look into that a little more closely.

24 DR. MONSEES: All right. A final comment. Then  
25 we'll move on.

1 DR. SICKLES: What Bob is relating to is that  
2 clinical image review would have to have different criteria  
3 because there won't be a volume of screening patients or  
4 diagnostic patients going through.

5 DR. FINDER: Right. It's a lot more complicated  
6 than just saying, you know, fold it in. But we are looking  
7 at the possibilities of doing that.

8 DR. MONSEES: Thank you. All right. Do you want  
9 to go ahead and talk about the next agenda item, review of  
10 summary minutes and future meetings.

11 **Review of Summary Minutes of May 1998 Meeting**

12 **Future Meetings**

13 DR. FINDER: Certainly. Does anybody have any  
14 question about the previous summary minutes?

15 [No response.]

16 DR. FINDER: Thank you. And now comes the hard  
17 part, the next meeting. I figure sometime next year would  
18 be nice.

19 DR. MONSEES: Do we want to do it before or after  
20 the final regs?

21 DR. FINDER: Well, after listening to some of the  
22 people talking about what they've got next year, I was  
23 thinking probably we could either do it much sooner than the  
24 final regulations go out, maybe in March, possibly April.  
25 But my preference would be to do it afterwards, and then

1 we're probably talking about June because I understand that  
2 May is a heavy month.

3 DR. MONSEES: So maybe people could get to you  
4 information about March and June?

5 DR. FINDER: Right, if they've got any dates that  
6 they know they can't make right now. If you'd just write  
7 them out, and what we'll do is the same thing we did before.  
8 We'll come up with some possibilities and fax them out to  
9 you. Then the other thing we have to do is try to get space  
10 for the next meeting. If you want, you can also come up  
11 with some suggestions about what you want to talk about.

12 **Medical Records**

13 DR. MONSEES: All right. We are now scheduled to  
14 continue our discussion of agenda items, and we have a break  
15 sometime this morning. If we could, just before we break,  
16 revisit the agenda item that we were discussing before we  
17 broke last night, and that was medical records. If you want  
18 to turn back to your draft compliance guide documents, which  
19 was pages 36 to 39 of the A document, 20 to 24 of the B  
20 document, and 25 of the small entity compliance guide.

21 Were there any other issues there? If you'll  
22 recall, we were discussing whether letters needed to go back  
23 out after addenda were made, and I'm not sure that we've  
24 come to closure on that, but I'm not sure that we can really  
25 quite practically come to closure on that right now.

1           Are there other items or are there any  
2   revolutionary suggestions about how we might--Dr. Sickles  
3   slept on it. Okay.

4           DR. SICKLES: Dr. Sickles has two proposals, but I  
5   think it would be very helpful to hear from other people as  
6   well.

7           My preference would be to have the FDA attempt,  
8   realizing that you may be constrained, to get your lawyers  
9   to somehow approve not requiring a second letter to the  
10   patient when the specific cause of the addendum is  
11   description that a clinician was notified of the results of  
12   the report. That would be the only exception. And it's  
13   very straightforward. It happens a lot, and I see no  
14   benefit to the patient to be notified of this specific fact.

15           On the other hand, I understand that you just may  
16   not be able to do that because of the way the regulation is  
17   written. If the regulation requires it, then I think the  
18   easiest way for facilities to comply would be to develop a  
19   highly streamlined letter to the patient that did not  
20   reiterate all the specifics of the initial letter which they  
21   had already received, but simply indicated that they're  
22   getting a second letter simply to notify them that their  
23   physician has been informed of the results.

24           DR. MONSEES: Okay. Any other items pertaining to  
25   the medical records, pages 36 to 39 of the A document, 20 to

1 24 of the B document, 25 of the compliance document? Any  
2 other issues that we want to raise about these draft  
3 documents? Ms. Hawkins?

4 MS. HAWKINS: In relationship to Dr. Sickles'  
5 comments is that notification of patient with the follow-up  
6 letters, this still remains a responsibility of a  
7 mammography facility to do that notification, does it not?  
8 Because I don't know if we would be able to depend upon  
9 primary care physicians or others to take on that  
10 responsibility.

11 Some of the more recent studies that I have seen,  
12 especially as they relate to older adults, indicate that  
13 they don't want to have less information about their care,  
14 but more information about what is happening to them. So I  
15 don't think that it's going to be as detrimental or as  
16 confusing to patients or consumers as you may think it would  
17 be to get those second letters.

18 DR. MONSEES: There are recognized responsi-  
19 bilities of the primary care physicians. This particular  
20 issue was looked at very carefully by the Agency for Health  
21 Care Policy and Research, and, in fact, those little fuchsia  
22 books--there's a set of them. There's a booklet for the  
23 practitioner, there's a booklet for facilities, and there's  
24 a booklet for patients. And there are very specific  
25 responsibilities that the practitioners need to be aware of.

1 That is, when they order a mammography, it's their  
2 responsibility to follow up with that patient about it. I  
3 don't think that all the responsibility needs to fall on the  
4 facility. The facility needs to participate, undoubtedly.  
5 But the practitioner cannot abdicate their responsibility.  
6 There are definite responsibilities, and I think those  
7 things should continue to be that way.

8 DR. SICKLES: The primary responsibility in a  
9 situation where there's an abnormal mammography result is  
10 with the clinician who ordered the test. That's where the  
11 primary responsibility lies.

12 As we sit here on a Mammography Quality Standards  
13 Committee, we have authority only over the facilities. They  
14 have a secondary responsibility. So what we're doing is  
15 we're addressing the facilities who have secondary  
16 responsibility, realizing that the primary responsibility  
17 really lies elsewhere.

18 When you get a mammography done and your doctor  
19 gets the report, your doctor should be calling you, and in  
20 most circumstances, of course, your doctor does. The  
21 purpose of patient notification is simply--among other  
22 things, it's to avoid a situation where the primary  
23 responsibility of your doctor just doesn't take place. And  
24 as we know, that happens occasionally, so this is a fail-  
25 safe to overcome that possibility.

1 DR. MONSEES: The document that I'm referring to  
2 is called "Quality Determinants of Mammography." It's  
3 published as three separate documents that go together--one  
4 for the patient, one for the referring physician, and one  
5 for the facility. "Quality Determinants of Mammography" by  
6 the Agency for Health Care Policy and Research. Is there  
7 any more information about how to get that document, do you  
8 know?

9 DR. FINDER: There's 800 numbers you can call to  
10 get it if you want that.

11 DR. MONSEES: You might want to get a copy of  
12 that. "Quality Determinants of Mammography." It's a few  
13 years old, but it's really quite current.

14 Any other issues pertaining to medical records  
15 that we want to talk about on this panel, those pages?

16 DR. NISHIKAWA: Charlie can veto this question  
17 right off the bat if necessary. It's the small document,  
18 page 23 at the bottom, mammographic image identification.  
19 We now have a digital system which, as far as I know, we are  
20 not printing onto hard copy. So they're going to be  
21 reviewed only from a monitor, in which case we can't  
22 physically place--well, we could, but right now the way the  
23 system works, there's no identification in the image that  
24 appears on the monitor. Could that be confined in this  
25 regulation or not? Is this regulation not applicable?

1 DR. MONSEES: And fold that into a bigger  
2 question. Since some of these units are being placed in the  
3 country, what are we going to do when digital mammography is  
4 out in practice? And it's about to happen in some  
5 facilities.

6 DR. FINDER: Okay. First of all, at this point,  
7 digital is still an experimental or investigational tool, so  
8 it doesn't have to meet any of the requirements.

9 The broader issue that you bring up is the issue  
10 about when the new technology comes into the mainstream and  
11 has to be accredited and certified, and whether these things  
12 will apply in some manner to the various aspects of the new  
13 technology.

14 In certain areas, we've already made the statement  
15 in the final regulations that they have to meet what the  
16 manufacturer specifies, mainly of the QA and QC. I believe  
17 in terms of mammographic identification, there would have to  
18 be some method to meet the requirement. The question is  
19 there would have to be new guidance probably related, and  
20 we'd have to look at the specific systems. And until they  
21 become available, it's going to be difficult to do that. We  
22 are working with manufacturers as these things come up, and  
23 the issue about soft copy interpretation of digital  
24 mammography is being discussed. So before these things  
25 become commercially available in terms of being accredited

1 and certified, these issues will have to be defined and  
2 worked out.

3 DR. NISHIKAWA: Are those issues brought up as  
4 companies goes for FDA approval? Do you check to see  
5 whether they're in compliance?

6 DR. FINDER: Yes.

7 DR. SICKLES: As a user of one of the  
8 investigational digital units, and particularly since we  
9 look at our images only soft copy, I wouldn't go too rapidly  
10 down the line of not requiring labeling on the images. It  
11 is certainly feasible and I think very important to have  
12 almost all of the labeling that is on a film mammogram on  
13 the digital image. You want the patient's name. You want  
14 the date of exam. Really, the only thing that serves no  
15 purpose is the facility name and address, because if you're  
16 looking at a soft copy, you know where you are.

17 DR. FINDER: One other thing. I think that  
18 cassette and screen identification--you know, these wouldn't  
19 apply.

20 DR. SICKLES: Yes, cassette and screen  
21 identification wouldn't apply, but if you have more than one  
22 digital unit, the room would apply.

23 DR. MONSEES: All right. Let's stop this here  
24 because what we're getting into here is discussion of what  
25 we can eventually talk about, I guess, if digital regs need

1 to be developed.

2 We're going to go to a break now, and because of  
3 checkout time, et cetera, let's discuss--the original agenda  
4 said we were going to go to lunch from 12:00 to 1:15, but  
5 checkout time I guess is about 12:00. So we're going to go  
6 to break now for 15 minutes. Then we'll reassemble, and  
7 then you can count on the lunch beginning at 11:45 at the  
8 latest so that there will be checkout time at that  
9 opportunity. Okay? Any other things that we need to do  
10 before we go to break?

11 DR. FINDER: I would also like to raise the  
12 potential of it might pay to work through lunch if we can  
13 finish early, and maybe you would want to check out now for  
14 that possibility. It depends on how the rest of the day  
15 goes.

16 DR. MONSEES: Okay. He's suggesting that, if  
17 possible, we could get through the rest of the agenda items  
18 and, therefore, work through lunch and then get out earlier.  
19 I think that sounds very attractive, although I don't want  
20 to rush the discussion. I think we need to give it fair  
21 discussion. So we may still have to break for lunch, but  
22 those of you who want to consider working through lunch and  
23 you need to check out, you may want to do it now.

24 So we will do a 15-minute--let's give it a 20-  
25 minute break then so that we have time to check out if we

1 want to. Reassemble in 20 minutes.

2 [Recess.]

3 DR. MONSEES: We'll reconvene now. We're going to  
4 begin with medical outcomes audit. Before we do, I just  
5 want to revisit medical records for just a second. Somebody  
6 from the audience asked about this, and I think this is an  
7 important point.

8 On page 22 of the new document--where is it?

9 Question: When a facility ceases operation and  
10 closes its doors, what should it do? And that's on page 22  
11 of the B document. And we were hearing that, for example,  
12 in the State of California, when a facility closed, it was  
13 hard to get the films relocated to a new site, and there was  
14 concern over those films being basically lost to the patient  
15 in terms of availability.

16 One of the things that I was thinking was that  
17 they should be available to the patient. Actually, that's  
18 included in the comment to that. So if you would just look  
19 at that and see if there's any other guidance that we could  
20 give the FDA about what might happen with those films. It  
21 looks like it says to make arrangements to transfer each  
22 patient's medical record, original mammography films, and  
23 reports to the mammography facility where the patient will  
24 be receiving future care and the patient's referring  
25 physician or the patient herself. So maybe it should be

1 emphasized that if any of the others are unknown, a letter  
2 should be sent to the patient herself so she can pick up her  
3 films and be responsible for those. Especially with what  
4 Mr. McCrohan was talking about with patients having access  
5 to their records, I think that would be a pertinent  
6 addition.

7 **Medical Outcomes Audit Program**

8 DR. MONSEES: Now we're going to move to medical  
9 outcomes audit, pages 57 to 60 of the A document, 35 of the  
10 B document, and it happens to be on 35 of the small entity  
11 compliance guide as well.

12 Do we have any suggestions for the FDA for their  
13 guidance here?

14 DR. SICKLES: While you're looking at yours, I can  
15 start with mine. Why don't we do A first of the big  
16 document first? If you go to page 58, that first question  
17 on the top, you know, where can a facility obtain more  
18 information about medical outcomes audit programs, since you  
19 are quoting the AHCPR document and Mammography Matters, you  
20 might also wish to cite the new BI-RADS third edition which  
21 has an excellent updated and--what represents the most  
22 current section on auditing.

23 DR. MONSEES: That was going to be one of my  
24 suggestions, too. It's very complete, and it gives not only  
25 detailed information about a detailed audit but more

1 streamlined audits as well.

2 DR. SICKLES: It gives information on how to do  
3 two audits, and there's even sort of a cookbook form as to  
4 how to do the calculations. It's very convenient. So you  
5 might want to cite that.

6 DR. MONSEES: Can we do that?

7 DR. SICKLES: If you can.

8 DR. FINDER: I'd have to check into that. The  
9 things that are cited here are federal documents, so I'd  
10 have to check and see whether we can refer to specific  
11 manuals like that.

12 DR. SICKLES: If you can, that's the best source.

13 The next one is at the bottom of the page, the  
14 question at the bottom about confidentiality. The response  
15 is, to my reading, less than convincing by saying FDA does  
16 not intend to have inspectors obtain copies. I think it  
17 would be a lot more convincing, if you really meant it, to  
18 say FDA will not permit inspectors to obtain copies. That  
19 would be a much more convincing statement, if it's true.  
20 Because if you just say FDA doesn't intend to have them do  
21 it, then, you know, of course, they could still do it. If  
22 they're really not supposed to do it and you don't want them  
23 to do it, then you could use stronger language.

24 DR. FINDER: I think that the reason it was  
25 written this way is, again, we're not trying to limit

1 ourselves in terms of what we can get, and this may be in  
2 conflict with the other portion of the Additional  
3 Mammography Review when we have to go and collect  
4 information for that. So, again, during the routine  
5 inspection, that would not be an issue, but I don't want to  
6 put in here something that--we'd have to check and make sure  
7 that it wouldn't be in conflict with the AMR policy, and we  
8 don't want to do that.

9 DR. SICKLES: Okay. Do you want me to continue,  
10 Barbara?

11 DR. MONSEES: Sure. I had a comment on this page,  
12 too.

13 DR. SICKLES: Why don't we do yours? I'm up to  
14 the next page.

15 DR. MONSEES: Maybe you've already seen it some  
16 other place, but up above, the general requirements, which  
17 mammograms must be included in a medical outcomes audit  
18 system, because of the confusion yesterday that we discussed  
19 about the incompletes, and it says here that you need to do  
20 the follow-up of the suspicious or highly suggestive, I  
21 think that we need to say that the incompletes need to be  
22 resolved, and any that fall into this category in the final  
23 assessment should be included in that. But I think we need  
24 to have some statement that the incompletes need to be  
25 brought to resolution. Don't you feel the same way about

1 that?

2 DR. SICKLES: Obviously the incompletes need to be  
3 brought to resolution, but the incompletes won't fit into  
4 this specific definition, until they are brought to  
5 resolution and they become BI-RADS 4 or 5.

6 DR. MONSEES: Right.

7 DR. SICKLES: But we can be very explicit.

8 DR. MONSEES: But since most of the final  
9 assessments start as incompletes and end up as 4 or 5's, I  
10 don't want it to be left out that the incompletes need to be  
11 brought to resolution to determine if they're 4's or 5's.

12 DR. SICKLES: Yes. Perhaps Dr. Finder wants to  
13 address the issue that we discussed off the cuff yesterday.

14 DR. FINDER: The issue comes up--the regulation  
15 requires that all the suspicious and highly suggestive be  
16 included. The issue that can come up in certain situation  
17 is take, for example, the screening facility that decides or  
18 as policy does not give a diagnosis of suspicious or highly  
19 suggestive of malignancy, but puts down incomplete for  
20 further workup. That may not be the facility that does the  
21 workup, in which case all they will have are the  
22 incompletes.

23 If we're talking about making them do follow-ups  
24 on all those incompletes, then we're changing the  
25 requirements. So we have to be very careful. I mean, we

1 can suggest in the guidance things, but we have to be  
2 careful about what can be required. I certainly have no  
3 problem including something about the incompletes and how  
4 they might be handled under certain circumstances until we  
5 can--

6 DR. SICKLES: Clearly there might be a specific  
7 circumstance--and I don't think it will come up frequently,  
8 if ever, but there might be a circumstance where a  
9 screening-only facility which is relatively low volume might  
10 actually go through a year where all of their recalls are  
11 actually classed as incomplete and none of them are classed  
12 as suspicious, so they won't have a lot of data.

13 I don't know if you can do this or not. I don't  
14 know what the regulations permit you to do. But it might be  
15 helpful to have a statement strongly discouraging facilities  
16 from using incomplete in the diagnostic mammography sense.  
17 I mean, that certainly builds into BI-RADS. I don't think  
18 you can prohibit it, but you can certainly discourage it.

19 DR. MONSEES: Dr. Dempsey?

20 DR. DEMPSEY: I would just like to briefly revisit  
21 Dr. Sickles' first comment so that Dr. Finder can be aware  
22 of the importance of this patient confidentiality issue.

23 At our facility it's probably the only issue where  
24 employees will be dismissed summarily for violation of  
25 anything along those lines, and I think that Ed's reticence

1 about the somewhat mild wording of that guidance needs to be  
2 addressed, because it is a very big issue.

3 DR. MONSEES: Okay? Yes, go ahead.

4 DR. SICKLES: Okay. If you will go to page 59,  
5 right on the top, this actually relates to something that's  
6 suggested--and I'm asking a question rather than making a  
7 specific change. If you read through the timings of what's  
8 listed there about the facility's first audit--and that's  
9 under the final regulations--what I'm reading through this  
10 is that a facility cannot be cited for a new regulation  
11 audit violation until April '01 because it takes a year  
12 before it goes into effect, then you have a year to collect  
13 the data, so that would be two years after April '99, if  
14 that's correct. And the only thing that you might--if  
15 that's true, which I assume it's true, what you might want  
16 to do is state that clearly but also remind facilities that  
17 those which are already in operation still will have to  
18 produce audit data under the interim regulations up until  
19 April '01. I assume they will; otherwise, they won't have  
20 to do any auditing between '99 and '01.

21 DR. FINDER: Yes, I think that what we're talking  
22 about here--

23 DR. SICKLES: Because the audit is slightly more  
24 extensive under the new regulations than the old  
25 regulations, you may want to make it clear that you still

1 have to follow the old system up until this time, and then  
2 the new system kicks in as of so-and-so.

3 DR. FINDER: I think that's a good point. This is  
4 referring to the specific point of frequency of analysis,  
5 but obviously they have to continue to do the audit as they  
6 have been doing under the interim regs, and we can put some  
7 clarification there about that.

8 DR. MONSEES: Are there any other comments, Dr.  
9 Sickles?

10 DR. SICKLES: I have one more, but this is on B,  
11 the shorter document, and this is on page 35. Again, this  
12 is a question. I'm not sure whether this is specifically  
13 addressed in regulation or is just part of the language of  
14 the regulation. But right on top of the page, the 21 CFR  
15 thing in italics, the last sentence of that talks about how  
16 the facility should initiated follow-up on surgical and/or  
17 pathology results in review of mammograms if you become  
18 aware that there's a malignancy involved.

19 Does this actually generate additional--I mean,  
20 I'm not aware that inspectors are looking for anything other  
21 than the usual correlation of abnormal results with  
22 pathology results. Is there intent here that there be more  
23 than that or that any cases of known malignancy simply get  
24 folded into that type of reporting?

25 DR. FINDER: It would be the latter, that those

1 cases that become known become part of the audit.

2 DR. SICKLES: Whether you call it abnormal or not,  
3 in other words.

4 DR. FINDER: Right, but you can--

5 DR. SICKLES: If you become aware of a false  
6 negative, it really ought to be in there.

7 DR. FINDER: Right.

8 DR. SICKLES: Again, if that's the situation, as I  
9 believe it to be, you might want to make it a little bit  
10 more explicit, maybe not in this section because there's no  
11 question about it, but in the question later on where--or  
12 maybe it's in A where you're talking about what gets  
13 included in the audit data, and you talk about, you know, if  
14 you interpret it as BI-RADS 4 or 5 it does. You might add a  
15 sentence saying that also if you become aware of a false  
16 negative, it ought to be put in there, folded in. Okay?

17 DR. MONSEES: Also on that page, the first  
18 question is: Must facilities differentiate screening from  
19 diagnostic studies when analyzing their medical outcomes  
20 audit data? The answer is: No. Although facilities must  
21 include all positive mammograms in the audit, they're not  
22 required to perform separate analyses for screening and  
23 diagnostic exams.

24 I think I'd like to see in there a statement  
25 saying that it is preferable to separate them. Although

1 it's not required, it is a helpful analysis. And, in fact,  
2 in order to be able to compare your data and your track  
3 record to published standards, it is helpful to separate  
4 them out. You cannot compare a combined database because of  
5 selection bias, high-risk patients that might appear in  
6 there, et cetera. You can't compare that data to anybody  
7 else's. But if you have a pure population of screening  
8 patients, you can compare it and you will get a feeling for  
9 how you're doing in your track record. So I think it should  
10 be encouraged, although not necessarily required. I'd like  
11 to see that comment in there.

12 Yes?

13 DR. DEMPSEY: I'm glad you made that comment. I  
14 was going to make a similar comment based on another aspect  
15 of it, and that is, without separating the screening and  
16 diagnostic, your review of your radiologists and their  
17 reading capabilities is almost meaningless. Because if  
18 Radiologist B did nothing but diagnostic problems and no  
19 screens, you wouldn't have an idea of his or her  
20 sensitivity.

21 DR. MONSEES: Absolutely.

22 DR. DEMPSEY: So it bears on it from another  
23 aspect as well.

24 DR. MONSEES: Absolutely. Yes?

25 DR. SICKLES: Just to further that comment,

1 although I don't know that you really want to put it in the  
2 guidance, but as a practical matter, in most practices which  
3 will be collecting data on an annual basis, once you start  
4 breaking down results by radiologist, you're going to be  
5 dealing with very, very small numbers of cancers per  
6 radiologist per year. And the analysis of this data becomes  
7 subject to large statistical variation. One year the  
8 radiologist may find none, and the next year he may find  
9 five, and that doesn't indicate that he had a good year and  
10 a bad year. It's just statistically how many women with  
11 cancer came through his reading lab or her reading lab.

12 DR. MONSEES: Does it stipulate in here that the  
13 audit information is also confidential and that you don't  
14 have to give it or show it to the inspector, just that  
15 you've done it? Because I think that many radiologists are  
16 concerned about that, especially with the medical-legal  
17 implications and discovery, et cetera. Is that stipulated  
18 in here? I don't remember seeing it.

19 DR. SICKLES: That you don't have to show it to  
20 the inspector?

21 DR. MONSEES: Well--

22 DR. SICKLES: I don't think that's stated.

23 DR. FINDER: That's actually an interesting  
24 question. What do they have to show? Is it okay to accept  
25 somebody's word that they do it, or do they have to see

1 something to show that it's actually been done? And, again,  
2 the idea here is that nobody's going to be taking this  
3 material and, you know, making copies of it and taking it  
4 away. However, I think that it is reasonable to ask--or in  
5 some cases to have the inspector take a look and say, yes,  
6 there actually are these files around, not that they look at  
7 each individual patient, but the alternative to that is just  
8 to say, oh, yes, we do it, it's in our SOP. And that's not  
9 what we've been doing actually under the interim regs. They  
10 have been going in and taking a look to see that there are  
11 lists. Again, they don't look at the individuals, but to  
12 make sure that the material actually is there.

13 So I don't want to get too involved with this in  
14 terms of the guidance because, yes, they will be looking at  
15 this material, and I don't want to give the impression that  
16 they necessarily don't.

17 DR. MONSEES: Can we make sure that it's  
18 stipulated that it is confidential and that it is not  
19 accessible via the Freedom of Information Act? Because  
20 people are interested in the fact that it's not  
21 discoverable. It should not be--internal audit data should  
22 not be discoverable, and I don't think that people want this  
23 to be entree for that to happen.

24 DR. FINDER: And, again, that was discussed  
25 extensively with the committee, and that's why we did not

1 ask for specific data to be obtained and we don't collect  
2 specific data. And the issue of if an inspector sees that  
3 there's a list of material there, that's not FOIable in the  
4 sense he doesn't have any data, he doesn't take anything  
5 with him.

6 DR. MONSEES: Great.

7 Any other comments pertaining to the audit?

8 [No response.]

9 **Consumer Complaint Mechanism**

10 DR. MONSEES: Okay. Let's move on to consumer  
11 complaint mechanism, pages 63 to 64 in the A document, 36 to  
12 37 in the B document, and 36 in the small entity compliance  
13 guide.

14 Do we have any comment on the draft document given  
15 to us, the draft documents given to us?

16 [No response.]

17 DR. MONSEES: I'll turn to our consumer reps and  
18 anybody else who feels that they'd like to make a comment.

19 MS. BROWN-DAVIS: My comments are on page 37 of  
20 Document B. I was a bit disturbed by my understanding of  
21 this. I'll start with paragraph 4, I guess that's line 1404  
22 to 1406, in response to the individuals filing the complaint  
23 within a reasonable time frame. I had no idea--and I'll  
24 make a comment on all of this afterwards. I had no idea  
25 what 5 meant. They design their complaint procedures to be

1 responsible to the particular needs of the patients they  
2 serve. I don't know what that means.

3 Then line 1415 to 1416, the facility reports  
4 unresolved serious complaints to its accreditation body in a  
5 manner and time frame specified by the body. So, again, it  
6 looks to me that the consumer is not really given anything  
7 specific to expect. The accreditation body gets to specify  
8 the time frame in which they get the information. The  
9 consumer gets to wait and get responded to within a  
10 reasonable time frame, which I think is just too loose.

11 DR. MONSEES: Okay. The accrediting body, the  
12 major one, the ACR, do you want to comment, Pam? Aren't you  
13 the AB here? You do have a copy of B documents, don't you?  
14 The facility reports unresolved serious complaints to its  
15 accreditation body in a manner and time frame specified by  
16 the body. Do you have a manner and time frame that's  
17 specified, or are you working on that?

18 MS. WILCOX-BUCHALLA: We will be working on it.  
19 Since this guidance is relatively new, we'll be working on  
20 developing recommendations to facilities. But I think it is  
21 important for us as the AB to hear what the consumer reps  
22 think is a reasonable option.

23 DR. MONSEES: Okay. So that's good. Let's hear.  
24 What do we think is reasonable?

25 MS. BROWN-DAVIS: I think that we can use as an

1 example the State of California. They seem to set a 30-day  
2 guideline or 30-day time frame to get back to the consumer,  
3 if I understood what was presented yesterday. Is that  
4 correct?

5 DR. MONSEES: Is Patricia Edgerton still here? Is  
6 it 30 days?

7 MS. EDGERTON: Yes.

8 DR. MONSEES: Thirty days, she says. Okay. So  
9 that's--does that seem reasonable?

10 MS. BROWN-DAVIS: Well, yes. I mean, you know,  
11 there's an end.

12 DR. MONSEES: Right, 30 days, sounds like most  
13 people can accommodate in 30 days. Okay. So there's your  
14 suggestion. Everybody here seems to think that's  
15 reasonable. Okay.

16 Now, pertaining to 4 and 5, those other parts that  
17 you weren't sure you understood?

18 MS. BROWN-DAVIS: Right.

19 DR. MONSEES: Number 4, let's do that one first.  
20 That one--what was the--the facility investigates the  
21 complaint, makes their effort to resolve the complaint, and  
22 responds to the individual filing the complaint within a  
23 reasonable time frame. Was it only the time that was the  
24 problem with paragraph 4?

25 MS. BROWN-DAVIS: Yes.

1 DR. MONSEES: Okay. So that's been addressed.  
2 Number 5, I think you said you weren't sure what it meant.  
3 After you said that, I'm reading it trying to figure out  
4 what it meant, too.

5 MS. BROWN-DAVIS: It sounds like a filler to me.

6 DR. MONSEES: Dr. Finder?

7 DR. FINDER: Well, it's not a filler. Basically  
8 this was to take into account the fact that facilities may  
9 be dealing with certain populations that have to have  
10 specifically different consumer complaint mechanisms,  
11 language, customs. They have to try and establish a system  
12 that is appropriate for the patients that they're going to  
13 be dealing with. For example, one size does not fit all,  
14 and that's what this is supposed to be in the sense that,  
15 you know, a facility might have to have, in effect, two  
16 different types of consumer complaint mechanisms to deal  
17 with the various populations that they have to serve.  
18 That's what it was supposed to address.

19 DR. MONSEES: Could you come up with a better  
20 wording, do you think, in here?

21 MS. BROWN-DAVIS: Well, I think that taking care  
22 of--because, you know, I mean, I think that the fact that a  
23 30-day time frame is rather long, it could be shorter if  
24 there were no language barriers or this kind of thing, that  
25 perhaps--I'm not even sure it even has to be in there

1 because it would seem to me that the onset would be 30 days.  
2 If something could be done sooner than that, it would be.  
3 And so that--do you understand what I'm saying? Those  
4 situations in which there was a language barrier or some  
5 reason that this population could not be handled quicker  
6 than 30 days?

7 DR. FINDER: Oh, I'm not talking about that.

8 DR. MONSEES: I think he's trying to--maybe  
9 paraphrase it is to say that the facility should be  
10 sensitive to diversity in language and cultural differences  
11 that may affect a patient's access or understanding of the  
12 repercussions the facility might have, or, you know, that  
13 they do have recourse and that they can complain. So I  
14 think that's what it means, isn't it?

15 DR. FINDER: Right.

16 DR. MONSEES: That's what it's intended to mean.

17 DR. FINDER: Yes. To my way of thinking, the two  
18 are separate. But the reasonable time frame would apply to  
19 everybody, whatever that time frame is, and, you know, 30  
20 days, if that's what accreditation body said, I think that  
21 would be reasonable.

22 The other is separate from that, and whether you  
23 have a different type of system for your individual patient  
24 populations, it would still have to be within that same time  
25 frame. So I don't think that--

1 DR. MONSEES: Right. We're not going to alter the  
2 time frame, but how should we tell the facilities and change  
3 the wording of 5 to say that they need to be sensitive to  
4 those issues?

5 You deal with a lot of different populations, Dr.  
6 Sickles. How could we tell them?

7 DR. SICKLES: Well, I think in this language you  
8 can just add a sentence explaining what you mean there,  
9 because the sentence as written doesn't really achieve the  
10 goal that you intended. It's very vague and it could be  
11 made a little bit more specific.

12 DR. FINDER: I would certainly be open, before  
13 everybody leaves today, if they've got a suggestion, you  
14 know, to include that. I would certainly take--we don't  
15 have to discuss it right this second.

16 DR. MONSEES: Okay.

17 DR. FINDER: Unless somebody's got an answer or a  
18 suggestion.

19 DR. MONSEES: Yes, Ms. Hawkins?

20 MS. HAWKINS: I think, though, in addressing that  
21 statement, that it be responsive to the particular needs of  
22 the patients, is that patients should be allowed to complain  
23 in person as well as in writing, because I think that may  
24 create a situation with the process of complaining.

25 DR. MONSEES: And I think that's especially

1 important considering some people are illiterate. So that  
2 is important.

3 MS. HAWKINS: I was going to address another  
4 issue. The issue that I would like to look at is that since  
5 the consumer complaint mechanism is going to be one that the  
6 advocacy groups are going to be working with as a way to  
7 improve mammography services and so forth, in looking at the  
8 question--and I'm in the large document on page 63, How is a  
9 serious complaint defined? I think that there should be  
10 some additional examples here so that advocacy groups will  
11 know what to instruct consumers to look for, because, you  
12 know, much of what we're defining as a serious problem, you  
13 know, has to do with poor image quality, the use of  
14 personnel that do not meet requirements in the statute and  
15 so forth like that. And these are things that--these are  
16 issues that are going to come out of surveys, inspection  
17 surveys.

18 As we heard in our last meeting, many of these  
19 survey reports are not going to get to the public. It's  
20 going to be a sizable amount of time, because I remember at  
21 the last meeting you said perhaps about three years.

22 So I think that rather than the issue focus on  
23 process, most consumers are going to be focusing on outcome.  
24 And I notice that when we looked at the Additional  
25 Mammography Review, one of the areas of defining a serious

1 complaint was missed cancers. And I think consumers may  
2 understand that, is that they feel, you know, they had a  
3 mammogram done, and then at a later date they were  
4 discovered, they feel that the cancer was discovered and  
5 we're looking at the false negatives. I think that this is  
6 something that they would be able to understand, would be  
7 missed mammograms.

8 I think also the issue of repeats, you know,  
9 frequent repeats or incompletes or call-backs, and so forth,  
10 that these are things that consumer groups would be able to  
11 convey to a consumer group, that these are the kinds of  
12 issues we need to bring to the attention of FDA.

13 DR. MONSEES: Is this the proper forum to go  
14 through the list of all of the possible complaints? Is  
15 there some other forum that consumer groups would have  
16 access to? You know, what's the role of this draft guidance  
17 document pertaining to all of the different possible  
18 complaints?

19 DR. FINDER: Well, I would say we can't include  
20 all the possible complaints, but certainly examples that the  
21 group thinks are representative of what the consumer out  
22 there is going to run into, I don't see any reason why not  
23 to include it; because, again, this document is not only for  
24 the facilities, it will also be available to the general  
25 public. So it's up to what you want to consider.

1 DR. MONSEES: I have some concern over using a  
2 missed cancer as a serious complaint because I think in some  
3 circumstances it is a problem with the mammogram or the  
4 interpretation, but in many circumstances it's not. I mean,  
5 that's just par for the course.

6 Would you like to comment on that?

7 DR. MENDELSON: I share your concern there. There  
8 are interval cancers, and the FDA's MQSA is not a tribunal,  
9 and it's not a medical authority on whether something was  
10 diagnosed at an appropriate time, whether a threshold for  
11 diagnosis had been exceeded or any other thing. I think  
12 perhaps other better examples might be with respect to  
13 diagnosis of cancers. Perhaps a woman who called a facility  
14 where she had gone before with a problem, something that she  
15 may have felt and was told that she couldn't have an  
16 appointment for a month, something of that sort may be  
17 something more appropriate to record among these kinds of  
18 complaints.

19 I also do think that in the definition of what a  
20 serious complaint is should be included examples of what  
21 serious complaints are not, such as calling on the telephone  
22 and not having the phone call picked up until the 14th or  
23 15th ring. That's not serious. But it would be something  
24 of concern if a facility had been phoned for an appointment  
25 and the patient not given one for an extended period of

1 time, even avowing that there was a problem, something of  
2 that sort. But to have both in the guidance, both what is  
3 appropriate for a serious complaint and also examples of  
4 what are not serious complaints.

5 DR. MONSEES: Okay. Yes, maybe--I don't know  
6 whether this is important--to define serious two different  
7 ways, but I think it's very important to do that, because  
8 what a consumer might think is serious might not mean that  
9 it results in their detriment of their health, which I think  
10 is what--the word serious here is being used it could  
11 compromise their health. And I think that that needs to be  
12 understood. It doesn't mean that it just seems serious to  
13 the patient.

14 I'll let Dr. Sickles speak, and then I'll get back  
15 to you, Ms. Hawkins.

16 DR. SICKLES: I have serious, actually very  
17 serious reservations about considering missed cancers as a  
18 consumer complaint issue. The reasons are medical-legal.  
19 Facilities, I can almost guarantee the FDA, are not going to  
20 want to be put in a position of having to respond in writing  
21 in any way to a consumer who approaches the facility with a  
22 missed cancer query without going through a lawyer. They  
23 won't. And you know that.

24 So to build it into the consumer complaint  
25 mechanism will basically be--will complicate the ability of

1 a facility to respond in a timely way because they're going  
2 to go to their lawyers, and then the lawyers are going to  
3 draft some statement that doesn't--it won't really be that  
4 responsive to the woman because once lawyers get involved in  
5 these things, nothing is responsive.

6 That doesn't mean that it isn't an important  
7 complaint, but I don't think it should be in a venue where  
8 the lawyers are going to take over because then we no longer  
9 have the meaningful dialogue that is what we really want.

10 DR. MONSEES: Lawyers aside, the other reason that  
11 I thought that it was important is that I don't think that  
12 the expectation should be that if a cancer is missed that it  
13 means there was anybody at fault and that there was a  
14 problem.

15 DR. SICKLES: Right. Apart from that--

16 DR. MONSEES: People's expectations are already  
17 high. Mammography is a very good technique, but everybody  
18 knows that it's not perfect, and there will be cancers that  
19 are missed. And I don't want people to think and I don't  
20 want to foster the opinion that if a cancer is missed,  
21 somebody was at fault. I don't believe that we want to be  
22 in the position to foster that opinion.

23 DR. SICKLES: I agree with you.

24 MS. HAWKINS: And that's as I say, but one of the  
25 reasons I felt comfortable in using it is that the

1 terminology is used in the Additional Mammography Review, is  
2 that on page 11 of this document where it says, you know,  
3 Level 1 findings, when we ask for additional review, and it  
4 comes out, the proportion of it, is that where the AB or FDA  
5 has received serious complaints about the quality of the  
6 physician's interpretations, accuracy, that is, missed  
7 cancers, incorrect interpretations, and so forth. So it's  
8 used there, and I don't see why it cannot be used in the  
9 context of informing a consumer.

10 Now, when we look in terms of serious complaints,  
11 we're looking in terms of complaints that are going to be  
12 fully investigated. And so it's not that a consumer is just  
13 going to be able to go out there and say, well, they missed  
14 my cancer, close them down, take them to court. But the  
15 actuality is that some cancers are missed. And there are,  
16 indeed, you know, inaccurate interpretations and so forth.  
17 We talked yesterday about, you know, when physicians are--  
18 interpreting physicians have to go under supervision, that  
19 this appears to be something that occurs. You know, I don't  
20 think it's unreasonable to ask that that be one of the ways  
21 of listing this. How else can consumers know?

22 And even though I know that this whole process is  
23 intended to improve and assure me as a woman that I can get  
24 a good mammogram, but there is no way that I as an  
25 individual can go into a mammography facility and come out

1 and know that I have had a good mammogram. There is no way  
2 I can see that. You know, there are no visible signs. The  
3 person may have that there, but, you know, as far as what  
4 goes on, it's got to be entrusted to the process.

5 DR. MONSEES: Would you like to respond to that,  
6 anybody? Yes?

7 MS. WILSON: I was wondering if the intent of this  
8 was to have serious complaints driven by the topics that are  
9 covered under MQSA regulations.

10 DR. MONSEES: Dr. Finder?

11 DR. FINDER: Well, first of all, there is a  
12 definition for serious complaints, actually for all these  
13 terms, in the definition section. And I think that  
14 obviously the complaints are--in the final regulations.

15 The other issue that you bring up, are these  
16 serious complaints that are under the auspices of MQSA, and  
17 the answer to that is yes. MQSA, though, covers a  
18 tremendous amount of ground in terms of mammography, and it  
19 does include in some of its sections specific reference to  
20 interpretation, accuracy, those kinds of issues. So I think  
21 that we can certainly look and see what we can do about  
22 modifying the language to include more examples.

23 I've heard many comments from both sides about  
24 some of the pitfalls of doing something like that, and we're  
25 going to have to look at that. But I think that we can

1 certainly look at all the examples that were brought up and  
2 see what we can include.

3 DR. MONSEES: Okay. Just let me give you the  
4 definition in the small entity compliance guide for serious  
5 adverse event. A serious complaint is one that leads to--is  
6 defined as a report of a serious adverse event; an adverse  
7 event may significantly compromise clinical outcomes--that  
8 may significantly compromise clinical outcomes, or an  
9 adverse event for which a facility fails to take appropriate  
10 corrective action in a timely manner. So any of the MQSA  
11 regs that corrective action, which is stipulated for most of  
12 the final regs, what is the time, the permissible time for  
13 corrective action. If you don't do that, that could be a  
14 serious complaint.

15 Yes?

16 DR. SICKLES: I don't mean to be misunderstood by  
17 what I said before. In truth, cancer not detected at  
18 mammography is an adverse clinical outcome. It is. The  
19 problem that I see is in forcing the consumer complaint  
20 mechanism to address that adverse outcome. I don't think  
21 that's the best way to address it, except perhaps to let the  
22 FDA know when these happen that they're occurring, because  
23 if the FDA gets 12 of them from one facility, then it may  
24 indicate a pattern that the FDA wants to go after. And for  
25 that purpose, I think there may be some value. There's

1 actually some value to the facility as well because one of  
2 the things facilities have a hard time doing is identifying  
3 their own false negatives.

4           The consumers may not appreciate this, but  
5 facilities have an easy way to find out about their true  
6 positives. When they call it abnormal and it's cancer, we  
7 track those. But we don't track the negative cases, and we  
8 only find out about false negatives when somebody tells us,  
9 or if the woman were to come back next year and, you know,  
10 we read it as normal and all of a sudden we notice that  
11 she's had a breast cancer operation. So facilities do need  
12 to have ways to identify false negatives, and this is one  
13 way in which a facility may find out.

14           I just don't want to get in a situation where the  
15 FDA is caught in the middle of medical-legal problems, and  
16 you may want to consult your lawyers before you work out the  
17 wording of this.

18           DR. MONSEES: Needless to say, obviously, a missed  
19 cancer may, in fact, be the mechanism to highlight a  
20 facility that's a poor facility. On the other hand, it may  
21 just draw attention to a facility that's doing a good job  
22 because there are, unfortunately, all too many missed  
23 cancers, no fault of anybody. That's just the way--  
24 unfortunately, mammography has its limits.

25           MS. HAWKINS: If I might just say something else,

1 one of the reasons why I think that it is an issue that  
2 consumers need to be aware of is because of the fact that  
3 there is no tracking false negatives. And somehow--but it's  
4 a big issue because we still have--even though, you know,  
5 mammography, the system is doing a great job, but we still  
6 have far, far too many women who will die of breast cancer.  
7 And so I just think it's an issue from a consumer  
8 perspective, and especially since we have many of those  
9 issues that relate to disparities in how health care is  
10 delivered. When we think in terms of these disparities that  
11 exist out there among minority groups and the general  
12 population, we know that many of them are due to what  
13 happens within health care facilities and so forth.

14           You know, there have been a number of studies that  
15 have looked at treatment of heart disease and follow-up and  
16 so forth. Even, too, when we think in terms of what's  
17 happening with the issue that I raised this morning about  
18 responsibility for reporting, we have a number of studies  
19 that show that minority women as far as follow-up after an  
20 abnormal mammogram is longer than it is for other women. So  
21 we need to have these answers.

22           So I think it's very important that we go out  
23 there, because the only way we can improve this is improve  
24 what consumers know about this process and improve their  
25 participation in it. And improvement means being very

1 honest with consumers.

2 DR. MONSEES: Right. And we have a long way to  
3 go, and a lot of it has to do with prior to all of this, and  
4 that is that people need to know and their doctors need to  
5 know that they need to get mammograms. And a lot of the  
6 death rate in this country, unfortunately, comes from the  
7 fact that people, despite all that's been done, despite all  
8 that's been said, are not going for mammograms at the rate  
9 that they should. And a lot of the disparity between  
10 different groups in terms of death rate has to do with  
11 compliance with screening guidelines and recommendations and  
12 access to care, not necessarily even beginning to talk about  
13 women that are in the system and that are getting  
14 mammograms. So that happens. We won't impact those  
15 underserved populations. They need to get in in the first  
16 place. And, of course, that's all I'm going to say because  
17 we're talking about mammography here, not talking about how  
18 to get people in for mammography.

19 Yes?

20 DR. MENDELSON: A couple of comments. I think we  
21 all share your concern, and one of the ways that I think we  
22 identified some years ago that would be effective in dealing  
23 with this is making patients, consumers, women, interactive  
24 with the health process. Their education is something that  
25 I think we have all been committed to, and I think this

1 entire discussion for the last two days really has grown out  
2 of an increased awareness on everyone's part of what we can  
3 attain, what we can achieve, that it does have some  
4 limitations, that there are some outliers on either end, and  
5 that we need to address it together.

6           So the interactivity is one of the things that I  
7 think, as we focus on this consumer complaint mechanism,  
8 that just brings me to really--I think that is important.  
9 The education part of it is something that I think we all  
10 need to share in the responsibility to achieve. But the  
11 consumer complaint mechanism isn't the final pathway. It's  
12 one way to go. It's not the way to seek satisfaction  
13 altogether. And it's incomplete as we see it here that it's  
14 left to facilities. What do you complain about? To whom?  
15 What's done about a complaint? Is there a written response?  
16 Is there a telephone response? Is it the medical director  
17 of the facility? Is the supervisory technologist? Who is  
18 responsible for responding to these complaints?

19           And then ultimately the FDA can be sought as an  
20 arbiter if there is no satisfaction. What will the FDA do  
21 and who will provide that satisfaction? That is a question  
22 here that I'm left with reading the consumer complaint  
23 mechanism.

24           DR. MONSEES: Yes?

25           DR. SICKLES: I have a different issue if we're

1 finished with this one. I don't want to close out the  
2 discussion on this unless we're finished.

3 DR. MONSEES: Do you have any last comments on  
4 that, on this issue before we move on? The same thing,  
5 consumer complaint mechanism, he's going to discuss. But on  
6 what we've just been discussing, do you have any other--

7 MS. HAWKINS: No, other than to say that we are,  
8 indeed, talking about a Level 1. We're talking about  
9 serious complaints, and consumers cannot be left out of this  
10 process. I don't think it's beyond what a consumer should  
11 have to deal with or be part of that process. I think it's  
12 very important.

13 DR. MONSEES: Okay.

14 DR. SICKLES: The other thing I want to direct  
15 your attention to is on page 37 of the B document, and it  
16 just has to do with the wording in the text. I think  
17 there's probably a way around this.

18 If you look at line 1408, number 5, facility  
19 encourages complaint reporting by ensuring confidentiality  
20 of their patients, this could be--I'm not sure that the word  
21 confidentiality--the use of the word confidentiality here  
22 seems to contradict what is on line 1398, which is that all  
23 consumer complaints require recordkeeping that include the  
24 name, address, and telephone number of the person making the  
25 complaint.

1           You know, either what your intent is is that the  
2 facility that is maintaining these lists has to keep the  
3 list under lock and key or some other mechanism, and then  
4 that ought to be explained on line 1408--and I suspect  
5 that's what you mean--or you've got to change the word  
6 confidentiality on 1408 so that it doesn't seem to  
7 contradict what was above. Obviously facilities should  
8 maintain a list of who is complaining and how to get hold of  
9 those people because they need to do that in order to  
10 address the complaint properly. And if there's ever going  
11 to be an investigation later on of them, the investigator  
12 has to know who complained. But I think it could be a  
13 little bit more explicit here so as not to see self-  
14 contradictory.

15           DR. MONSEES: Do you think along these lines,  
16 thinking of a facility where, of course, where we have our  
17 share of people that call and have complaints, that we can  
18 share our concerns with the primary care physician? Often  
19 there are people that can't get appointments or whatever.  
20 You can imagine that they may have been talked to in a  
21 fashion that they might consider rude or whatever, or their  
22 doctor didn't get a copy of the report. Can we share--in  
23 terms of confidentiality, does that mean that we can call  
24 the physician and speak with them about these things? Would  
25 that preclude speaking with the physician?

1 DR. FINDER: You're asking a legal opinion?

2 DR. MONSEES: Well, I don't know. Now that he's  
3 bringing this up, I--

4 DR. FINDER: We can look into that and find out  
5 whether that's allowed or not or a good procedure or not.  
6 We can, again, give some recommendations in the guidance,  
7 but at this point, I just don't know the answer to that  
8 question.

9 DR. SICKLES: As a practical matter, in resolving  
10 a complaint, one of the things that one might do is actually  
11 speak to the person who's making it. That's the way we  
12 resolve our complaints. We call them up and say, you know,  
13 explain exactly what's going on.

14 DR. MONSEES: We do, too.

15 DR. SICKLES: If part of the complaint could be  
16 transmitted to, for example, the referring physician, it's  
17 very simple to just ask the woman who's complaining, Would  
18 you mind if I share this with your doctor? It might be  
19 helpful. And if she says sure, then there's no problem at  
20 all.

21 DR. MONSEES: Oftentimes, in terms of making  
22 appointments or finding out about follow-ups, et cetera, it  
23 comes into play. So that's a good suggestion.

24 Yes?

25 DR. DEMPSEY: As Director of Radiology in our

1 outpatient facility, I am involved in all consumer  
2 complaints in every aspect of our department, and I can tell  
3 you that communication with the patient's referring  
4 physician is quite key in making sure that everybody  
5 understands what's going on. And it is not a breach of  
6 confidentiality because that is the patient's referring  
7 physician, and as the result of that physician ordering the  
8 test, this somehow transpired and so it's all part of a  
9 reporting mechanism. So it's quite official, and I think  
10 part of resolving these complaints is to get the primary  
11 physician involved, because many times in investigating the  
12 complaint, what they really wanted in the first place is key  
13 to find out if something was transmitted correctly.

14 DR. MONSEES: I agree with you.

15 Okay. Any other issues pertaining to the consumer  
16 complaint mechanism, pages 60 through 65 of the A dc, 36 and  
17 37 of the B document?

18 Yes. Mr. Mobley?

19 MR. MOBLEY: If I can just comment. Sitting on  
20 the sides, real quickly, it seems like to me that what we're  
21 saying here is this--you're trying to develop a means of  
22 communication to deal with specific issues or specific  
23 concerns of the consumer, and it seems to me that the  
24 original answer here is not really addressing that very  
25 well, and we've had some other examples thrown out. And I

1 think it is important to address the question of the missed  
2 cancers, because as I was sitting here just thinking about,  
3 listening to you all discuss it, you know, what's the most  
4 serious concern I would have for my wife or daughter, and  
5 that would be a missed cancer. Do I know--I mean, I  
6 certainly understand the realities of it, but I think that  
7 is an important piece of information to go back to the  
8 facility and to have that facility look at it and say, yes,  
9 that's one that was missed and, unfortunately, because of  
10 the type cancer it is or--well, wait a minute, our imaging  
11 process has a problem, or whatever.

12 I know there are certain legal aspects to that,  
13 but the reality here, we're trying to develop a  
14 communications link that I think is very important in the  
15 process, maybe actually one of the most important parts of  
16 the process, because in inspections and regulations you can  
17 only do so much. The feedback you get from the consumers  
18 and the people in the system are what does the rest of it.  
19 It goes well beyond what you can accomplish with regulations  
20 and inspections, et cetera.

21 Thank you.

22 DR. MONSEES: I don't have any objection to  
23 considering that. I just want to make sure that we all know  
24 that it doesn't necessarily mean that there's some fault  
25 involved.

1 DR. SICKLES: The only thing that is tricky in  
2 working this out is apparently, according to the word of  
3 this, at least my reading of it, is the facility is the one  
4 who decides whether the complaint is resolved. At least  
5 that seems to be the intent of it. Maybe that's not true.

6 DR. FINDER: No.

7 DR. SICKLES: Well, put it this way: When there--  
8 maybe I'm misunderstanding. When there is a consumer  
9 complaint and the facility addresses the issue and believes  
10 that the issue is resolved, then I would assume, you know,  
11 there's just something put in the record saying we think  
12 this is resolved. But it also says in the regulation that  
13 the facility has to report to the accrediting body if there  
14 are unresolved consumer complaints. Who decides whether  
15 they're resolved?

16 DR. FINDER: Well, actually, both, because it's  
17 not an either/or--or maybe it is. The patient, if they  
18 don't believe that the situation has been resolved, can take  
19 it to the accreditation body and to us.

20 DR. SICKLES: I understand that. But from the  
21 facility's point of view, if the facility believes that the  
22 complaint is resolved, the facility will somehow document  
23 this in their own records, and then they'll let it sit, and  
24 they won't report it. It's just up to--then it would then  
25 be up to the patient or the complainer to go to the

1 accrediting body or to go to the FDA directly?

2 DR. FINDER: This is a question--

3 DR. SICKLES: This is vague.

4 DR. FINDER: In a sense it isn't because there are  
5 situations where there will be a complaint and after the  
6 situation has, quote-unquote, been resolved, the patient  
7 still won't be happy about the result. The facility may  
8 believe that they've done all that they can do, and there  
9 are those types of situations, but, in effect, it isn't  
10 closed. The patient always has the ability to go further  
11 and complain to the accreditation body or directly to us,  
12 and they have. We've gotten complaints directly from  
13 patients when they feel that what's happening at the  
14 facility doesn't meet their expectations. And we've worked  
15 with them to try and solve those situations.

16 DR. MENDELSON: What precisely does happen if the  
17 complaint goes beyond the facility and it's unresolved? Who  
18 in the accrediting body deals with the complaint? Is that  
19 specified? Who in the FDA deals with the complaint if it  
20 goes beyond the accrediting body to the FDA? What's the  
21 ladder of ascent there for dealing with complaints?

22 DR. FINDER: I can't address specifically the  
23 issue of the accreditation body because I personally don't  
24 get that involved with their internal workings. They may be  
25 able to answer that more--

1 DR. MENDELSON: Have you developed that yet?

2 MS. WILCOX-BUCHALLA: We've had a process in place  
3 since the law went into effect to process and follow up on  
4 consumer complaints. Any complaint received in writing we  
5 have staff that's designated that follows up on complaints.  
6 We have a procedure and letters that are used to follow up  
7 with the facility and, then when the complaint is resolved,  
8 to close the file. And we report to FDA on an annual basis  
9 the number of complaints we've received and whether they've  
10 been resolved or not.

11 DR. MONSEES: Correct me if I'm wrong, but haven't  
12 some of these complaints been the source of review of the  
13 facility by sending a team, including a physicist, a staff  
14 person, and a radiologist, to the site to inspect?

15 MS. WILCOX-BUCHALLA: In fact, that's true. And  
16 whether it comes from a consumer, from another physician,  
17 from the referring physician, technologist, there is a  
18 process to take appropriate action if that's required,  
19 depending on what the situation is.

20 DR. MONSEES: So if you think it's a quality  
21 issue, you will send a team out?

22 MS. WILCOX-BUCHALLA: That's correct. We have a  
23 survey process, for those of you who may not be aware, that  
24 includes, as Dr. Monsees said, a physician who is one of our  
25 clinical image reviewers, a medical physicist, who is also a

1 reviewer, and then a staff person, who in most cases is a  
2 mammo-certified technologist. And so we can go out and  
3 investigate the complaint and verify whether, in fact, those  
4 problems may exist.

5 For example, the very first site visit that we  
6 did, which was before MQSA, was because it was reported to  
7 us that the receptionist was taking mammograms. And so the  
8 only way to verify that was to go out there and find out if  
9 that was, in fact, true. This was pre-MQSA, and we did  
10 that. We were able to verify it, and now because of the  
11 law, there are teeth that will impact a site that does those  
12 kinds of things.

13 Does that answer the question?

14 DR. MONSEES: Yes.

15 DR. MENDELSON: And may I ask one more question?  
16 How many in the last year, for example, of the reviews were--  
17 -how many consumer complaints ended up with ACR as the  
18 accrediting body? And how many of those generated site  
19 reviews?

20 MS. WILCOX-BUCHALLA: I don't have those  
21 statistics with me, Dr. Mendelson.

22 DR. MENDELSON: Approximately? Is it--

23 MS. WILCOX-BUCHALLA: There is another process  
24 that we can also use which is called random film checks.  
25 They're not really random. They're targeted. If we have a

1 complaint about image quality from either a consumer--and  
2 probably--Marybeth, do you have a better handle on what  
3 those numbers might be? Yes, it's a small number, but it's  
4 significant, and it requires a significant effort. It  
5 always is prioritized as top of the line to be followed up  
6 on.

7 DR. MENDELSON: And were the resolutions agreed  
8 upon to everyone's satisfaction, once the--

9 MS. WILCOX-BUCHALLA: As far as I'm aware. The  
10 point is to get people back to doing the right thing the  
11 right way.

12 DR. FINDER: We deal with complaints in a somewhat  
13 similar manner. It goes to the person who is best equipped  
14 to deal with it, and the ones that I'm most familiar with  
15 are the ones that we've dealt with in terms of patients  
16 complaining that they can't get their mammograms. And I can  
17 honestly say that it's impressive to see how quickly things  
18 get changed when the call is from the FDA. And if you want  
19 to say that the complaint was resolved, again, it depends on  
20 whose side you're on, but I would say that all of them have  
21 been resolved on the patient's side.

22 Now, whether the facility was happy about that or  
23 not, that's a different issue. But as far as we're  
24 concerned, that closes it out because those films were  
25 released. And, again, it's not just film release. It's any

1 issue that comes up. And we deal with and have  
2 conversations with the accreditation body so that we share  
3 information about complaints that we receive, complaints  
4 that they receive. So we do work together with all the  
5 accreditation bodies to accomplish that.

6 MS. BROWN-DAVIS: I'd like to ask a question of  
7 Pam. You mentioned significant--no, you mentioned small  
8 numbers, but significant. I just don't have a sense of what  
9 that means in terms of how many.

10 MS. WILCOX-BUCHALLA: I don't have numbers with  
11 me, so I don't want to make any misstatements. I guess what  
12 I'm saying is not significant numbers, but significant  
13 issues--image quality, unqualified personnel.

14 Unfortunately, one of the most difficult issues to  
15 deal with is the issue of the patient who feels there was a  
16 problem with compression. And I don't know that you ever  
17 really come up with a good resolution, but as Dr. Dempsey  
18 said, one of the most important issues is that the facility  
19 needs to deal directly with the patient and work with them  
20 to make sure that they're satisfied. That's, as I said, the  
21 most difficult issue to deal with. If the images are good,  
22 then the compression was important. And the patient needs  
23 to be aware that that's part of the process. On the other  
24 hand, we usually get in the course of a year three or four  
25 women who feel that the compression was excessive, and we

1 try to work with both the patient and the site to get the  
2 women to realize that it is critical and that she should not  
3 stop having mammograms because she was unhappy about the  
4 compression.

5 So that's one of the big pieces to me that's  
6 important, is the educational issue that we can participate  
7 in, but it isn't about stopping a facility from doing  
8 something.

9 I am not sure that I am really giving you the  
10 answer that you're looking for.

11 MS. BROWN-DAVIS: Well, you did mention a number.  
12 You said three or four.

13 MS. WILCOX-BUCHALLA: Of compression issues,  
14 right.

15 MS. BROWN-DAVIS: I'm just trying to get--you  
16 know, a small number could be 1,000. I just wanted  
17 something specific.

18 MS. WILCOX-BUCHALLA: And in terms of random film  
19 checks and site visits, it's also well under a hundred of  
20 facilities that we need to follow up on.

21 MS. BROWN-DAVIS: Thank you.

22 DR. MONSEES: Ruth Fischer, did you have a comment  
23 pertaining to this subject?

24 MS. FISCHER: Since the accreditation bodies have  
25 reported to us on this issue yearly since they became

1 accreditation bodies, my best recollection is that for ACR  
2 they average less than 50 complaints a year.

3 DR. MONSEES: Okay. There you go. Thank you.

4 Yes, Ms. Hawkins?

5 MS. HAWKINS: One of the things that I'd like to  
6 say is that, you know, we're looking in terms of this being  
7 an issue where the whole process of MQSA, the focus has been  
8 on the industry. It has not been on informing the  
9 consumers. And so consumers have yet to learn about these  
10 revelations at the depth that they should know, because, you  
11 know, even when we have addressed this in past meetings,  
12 I've been told that the emphasis, the focus has been on the  
13 industry, on those facilities out there. And so when we  
14 bring this issue to the consumers, I think we may--it's  
15 something that has to be done, and it has to be done  
16 realistically and in terms of what FDA is using as serious  
17 complaints.

18 DR. FINDER: Let me just address it in a minor  
19 way, the sense that we do try and deal with consumer groups  
20 to make sure that they're aware, and I would still agree  
21 with you that the average consumer doesn't know enough. So  
22 all that means to us is that we've got to continue the work  
23 that we're doing. You've got to help us, and the mechanisms  
24 that you can come up with to help us get this message out  
25 would certainly be appreciated.

1           We do have mailing lists which we send out to the  
2 largest consumer groups to let them know what we're doing,  
3 but it then is up to them to pass along the message in the  
4 method that they best can. Sometimes they do it, and  
5 sometimes they don't. And sometimes they're more or less  
6 successful. But we're continuing with that process because,  
7 you're right, it doesn't help us if the consumers out there  
8 don't know all the issues that they have to address and some  
9 of their responsibilities and some of the mechanisms that  
10 they have. So it is a learning process. It's a  
11 continuation of a learning process, but it's got to work.

12           DR. MONSEES: And I think as the word spreads and  
13 as people become less intimidated from coming forward, I  
14 expect the numbers will rise, as you're saying. And I don't  
15 think that it's necessarily a bad thing. I don't think it  
16 will necessarily reflect the fact that facilities are doing  
17 a worse job, but perhaps that people are able to come  
18 forward more. We shouldn't necessarily consider that if the  
19 numbers rise that means that things are deteriorating. In  
20 fact, it's maybe that communication is getting better.

21                           **Inspection Finding Levels**

22           DR. MONSEES: Okay. With that I think we'll  
23 complete--we're going to move to inspection finding levels  
24 because I think it follows more closely and because Mr.  
25 Mobley is going to need to leave. So we're going to move to

1 inspection finding levels--the original document, the bigger  
2 one, 67 to 72, 3 in the smaller document. And I think we're  
3 going to turn to our regulator here and anybody else on the  
4 panel who wants to talk about inspection finding levels.  
5 What shall we tell the FDA?

6 MR. MOBLEY: I have a number of questions. I  
7 guess my first comment is I really do appreciate that they  
8 retained the three levels of findings and that the changes  
9 or proposed finding levels are--you know, I don't believe  
10 they're major changes. I have a couple of questions,  
11 though. We're on page 69 of the A document, right in the  
12 middle, for digital mammography.

13 It says there, Monitor QC done per manufacturer's  
14 recommendation, and that's an L3, and then the next one, Is  
15 the manufacturer recommended phantom used with laser films?  
16 And that's an L3. And it just seemed to me that in looking  
17 at this and comparing these things, I felt that these are  
18 both imaging issues, and I felt that imaging issues  
19 elsewhere had been addressed as L2 issues. Maybe I'm  
20 misreading the importance of their imaging--their part in  
21 the imaging system. But I felt those were more  
22 appropriately L2 findings.

23 DR. MONSEES: Why are these even here is my  
24 question since we don't have regs for digital.

25 DR. FINDER: Well, actually, we do have regs for

1 digital in the sense that there's a statement in the  
2 regulations that for non-film screen systems you have to  
3 follow the manufacturer's instructions or recommendations.  
4 So, in effect, what we're trying to do is prepare for the  
5 future. And you're right. There are no machines out there  
6 right now, but we're trying to be ahead of the game.

7 DR. MONSEES: Does that answer your specific  
8 question about the level?

9 MR. MOBLEY: It answers your question.

10 DR. MONSEES: It did not answer yours.

11 [Laughter.]

12 DR. FINDER: The question is should these L3's be  
13 L2's. You know, that was the proposal--

14 MR. MOBLEY: I mean, Bob or Robert, or Robert or  
15 Bob, might want to address that. I'm just throwing that out  
16 there.

17 DR. NISHIKAWA: I looked at what other L2's are,  
18 and I agree with Mike. L3's should probably be L2's.

19 DR. MONSEES: Both of them?

20 DR. NISHIKAWA: Yes.

21 DR. MONSEES: Are you in agreement with that, Mr.  
22 Pizzutiello, L3's and L2's--

23 DR. PIZZUTIELLO: I don't have any problem with  
24 that.

25 DR. MONSEES: Okay. Yes?

1 DR. SICKLES: My only question relating to this  
2 is: Is your question here related to whether the phantom  
3 tests had good results or simply that the facility used the  
4 specific phantom recommended by the manufacturer? I'm not  
5 sure which issue is being addressed by this question. Is  
6 the manufacturer's recommended phantom used could be  
7 interpreted simply as did they use the manufacturer's  
8 phantom or did they use another one which might have been  
9 equivalent? If they were using one that is judged  
10 equivalent, it shouldn't be a citation at all.

11 DR. FINDER: Right. Well, I think what the  
12 question here is asking is if they're using a different  
13 phantom that hasn't been approved by anybody, and the issue,  
14 especially with digital, could be that they could be using--  
15 let's say that the typical phantom that they use for film  
16 screen when the manufacturer's recommending something else.  
17 That's the issue that I believe--and the other thing that I  
18 just want to make a mention of is that the overall question  
19 about the QA-QC procedures being followed is an L2 here. So  
20 if they're not following the procedures, that's an L2.  
21 These are sub-questions or specific questions about that.  
22 But, you know, we can certainly look at the issue about  
23 changing the levels.

24 DR. SICKLES: I have no objection to changing  
25 levels to L2's, but I'd be careful about that third one

1 about the recommended phantom, simply in terms of making  
2 sure that a facility that wants to use a phantom that's  
3 different than the manufacturer's that is equivalent or more  
4 stringent wouldn't be cited.

5 MR. MOBLEY: I could agree with that. I guess my  
6 perspective in dealing with these kinds of issues is that  
7 too many times--and I'm not speaking mammography here. I'm  
8 just speaking overall. Too many times we run into someone  
9 who uses a new methodology, but they want to hang on to old  
10 procedures, when in reality they are not pertinent, and it  
11 just becomes a real critical issue. And in this particular  
12 thing where you're talking about something where there are  
13 not specific standards, not specific regulations, and it's  
14 new, I think you've got to hang on to that manufacturer's  
15 specifications as long as you can until you can develop  
16 those broader regulations.

17 DR. MONSEES: Yes?

18 MR. MOURAD: Wally Mourad, FDA. This is  
19 apparently a typo. It is L2 in both cases.

20 [Laughter.]

21 DR. MONSEES: Thank you.

22 MR. MOBLEY: Well, that settles that question.  
23 All that work I did. Never mind.

24 Next item--stay close, Wally. You can get us out  
25 of here quicker. And you'll identify my biases, I guess, as

1 we go along here, but here under interpreting physician's  
2 qualifications, the new modality training--and it's  
3 interesting. New modality training if applicable. I don't  
4 understand that. But it's my perspective, following on my  
5 comment, it's my perspective when you have new modalities,  
6 it's extraordinarily important that people understand what  
7 the newness brings them. And I just think that training  
8 should be L1. I think people should have the training  
9 necessary to deal with a new modality that they are adopting  
10 and bringing into their practice.

11 Now, here I'm assuming I'm addressing somebody  
12 bringing it into the routine practice and not necessarily  
13 somebody working in the research arena or in the  
14 developmental arena of a process. I just believe that  
15 should be L1.

16 DR. MONSEES: I'll call for comments from the  
17 panel members. I'd tend to agree, but I'd call for your  
18 opinions if you have--do you agree or disagree?

19 DR. MENDELSON: I think it could be a Level 1. It  
20 certainly is important and is serious enough to become a  
21 major part of practice. It should be afforded that  
22 significance in the inspection levels.

23 DR. MONSEES: Yes?

24 DR. DEMPSEY: In point of fact, the whole issue  
25 about who's doing stereotactic core biopsy revolves around

1 that issue right there.

2 DR. MONSEES: Yes?

3 DR. PIZZUTIELLO: By making it an L1, you strongly  
4 motivate facilities to make sure that every person who's  
5 involved in this modality is appropriately trained rather  
6 than just a few who are doing it most of the time and  
7 somebody who's filling in might not be trained. And it's  
8 certainly not in anyone's interest for an untrained person  
9 to even fill in. So I support the L1.

10 DR. MONSEES: Okay.

11 DR. SICKLES: I support the L1 as well. I think  
12 what they mean by if applicable is some facilities won't be  
13 using the new modality so it won't be applicable. I guess  
14 that's what they meant.

15 MR. MOBLEY: I guess that's self-evident to me.  
16 Why would you be looking at the question at that point?

17 DR. MONSEES: Likewise, do you want to take the  
18 technologist qualification, new modality training, and move  
19 that up to an L1, too?

20 MR. MOBLEY: Certainly. I mean, that's my  
21 comment.

22 DR. MONSEES: Yes, I think we're in agreement with  
23 that.

24 MR. MOBLEY: My next--are we done with that one?

25 DR. MONSEES: Yes.

1           MR. MOBLEY: My next issue is on technologist  
2 qualifications. Are 40 supervised hours of training  
3 adequate? Now that I read that, I'm not sure what that  
4 really means. But I also felt like that the technologist is  
5 the person that's there, that's doing the procedure. I  
6 mean, that's the focal point of the procedure in terms of  
7 producing the image. And I felt that that supervised hours  
8 of training was important enough to be considered as an L1  
9 finding. But maybe I'm misreading what that supervised  
10 hours of--it must be adequate training, 40 supervised hours  
11 of adequate training.

12           DR. FINDER: Right. These are questions as they  
13 might appear on the inspection software, and there's going  
14 to be guidance, obviously, to the inspectors on how to  
15 interpret these things. But what this basically means is:  
16 Does this person have the 40 hours, the supervised hours?  
17 In other words, is that training adequate?

18           MR. MOBLEY: Okay. That helps me understand. So  
19 it's a yes or no, and if it's a no, then that's an L2 versus  
20 an L1.

21           DR. FINDER: Right.

22           MR. MOBLEY: What does everybody else think?

23           DR. FINDER: The other thing, just to put this  
24 into some kind of perspective because you don't have all the  
25 questions and you don't have all the current levels, what

1 we've tried to do is separate out those areas that are what  
2 we consider the most important, like for a physician we're  
3 talking about whether they've had a license to practice  
4 medicine. We figure that's an L1. And if you create  
5 certain situations where you've considered certain things to  
6 be L1, then you look at the other areas, and do you think  
7 that they're as important as that. And you try and gauge  
8 the process.

9           There are other things in here that the  
10 technologist has to be licensed or certified. That's an L1.  
11 So is that as important as some of these other things? And  
12 we have to try and grade these things.

13           The other thing I just want to make mention of,  
14 this is the version that's already out for proposal. It's  
15 out to the public. For anything that we want to go and up  
16 the ante on in terms of raising the level, we have to  
17 repropose. I mean, it's not impossible to do. It certainly  
18 can be done. But we'd have to repropose again.

19           DR. MONSEES: So what went out to the public with  
20 the typo question, would it have been the 2 or the 3?

21           DR. FINDER: I don't know what--if that's what  
22 went out as the official document--and this may not be the  
23 one. Actually, I can check which one went out.

24           DR. SICKLES: Not being completely familiar with  
25 all of the aspects of this--this is just shorthand on this

1 page for a whole bunch of requirements--I think the most  
2 important thing that's done is that the L1's and L2's in  
3 terms of personnel requirements are consistent from  
4 radiologist to technologist to physicist. And if  
5 radiologists become L1 principally because of basic initial  
6 education, then technologists should become L1 because of  
7 basic initial education. If continuing education rises only  
8 to a Level 2, then any aspect of continuing education should  
9 just rise to Level 2.

10 I'm just not sure how these things fit in because  
11 they're so shorthanded that I don't know where they are.

12 MR. MOBLEY: I agree, and I think that comment is  
13 probably very pertinent to my thoughts, too, because I did  
14 not go back and try to sort this out or fold it into all the  
15 other issues that are there.

16 I did just use this broad perspective of, you  
17 know, trying to assure that I felt like they were  
18 reasonable, within the range of what I was looking at and my  
19 general knowledge.

20 DR. MONSEES: Do you have any other issues?

21 MR. MOBLEY: Let me make this one while I'm  
22 thinking about it. This is a general comment.

23 DR. MONSEES: Go ahead.

24 MR. MOBLEY: Well, I--

25 DR. MONSEES: Okay. You want to wait until he--

1 MR. MOBLEY: Well, maybe Ruth or somebody can  
2 carry this back to Charlie, but we got a number of different  
3 things to review, and as I was reading, doing my homework  
4 for the meeting, I thought I read that I only had to  
5 actually review one of these, although I tried to look at  
6 all of them, but I spent most of my time on Document A. But  
7 it was not clearly identified for me which of these  
8 documents were what or how they were going to be utilized.  
9 And that's--I mean, it bothers me to come to a meeting and  
10 say that I'm commenting on something--and I do know that I'm  
11 just providing advisory information or comment--and then be  
12 told, well, you know, your review's okay but it's etched in  
13 concrete down on Constitution Avenue and we can't get a  
14 concrete truck in there to fix it for ten years. I could  
15 spend my time doing something else, making comments  
16 elsewhere, maybe, but that's fine. I just wanted to clarify  
17 that.

18 DR. MONSEES: In the letter that we received--I  
19 assume you received the same one--it told us specifically  
20 documents we were going to go through.

21 MR. MOBLEY: Right, but I thought that--

22 DR. MONSEES: Are you saying that that was not--

23 MR. MOBLEY: I thought that there was a comment  
24 that these were the same, essentially the same documents.  
25 Maybe I just misread--wait a minute. These were essentially

1 the same documents. I thought that's what I had--

2 DR. MONSEES: Well, there was a previous one that  
3 we discussed.

4 MR. MOBLEY: Okay. Well, that's fine. That's my  
5 misunderstanding. Yes, I have further comments.

6 On page 70, under medical physicist  
7 qualifications, new modality training, do you recognize my  
8 bias again? It's an L2, and I think it should be L1. The  
9 same type of comment even for physicists.

10 DR. PIZZUTIELLO: What do you mean "even for  
11 physicists"?

12 [Laughter.]

13 MR. MOBLEY: I consider myself one, having trained  
14 as a physicist some years ago. But, I mean, you know, new  
15 modalities are new modalities, and you can go into these  
16 things, you know--

17 DR. MONSEES: We're all agreeing with you.

18 MR. MOBLEY: Okay. Keep me straight.

19 Item B on that page, page 70, Item B, proposed  
20 changes in current finding levels, my comments here are just  
21 sort of a generic thing. In Item 1 there, we're going from  
22 a number of different levels with different levels of  
23 findings to one level of finding. In Item 2 there, we're  
24 going from one level of finding to different levels of  
25 finding. So I just found that sort of inconsistent. I

1 don't have a specific comment on either one of them,  
2 necessarily. Either way is reasonable. But I thought that  
3 going in the opposite direction on two different issues was  
4 just kind of interesting.

5 DR. MONSEES: Do you have a suggestion to improve  
6 it or not really?

7 MR. MOBLEY: Just an observation. I'm just  
8 wondering why--if there is a reason to reduce the issues on  
9 Item 1 to just one level of finding, then why do we expand  
10 on 2 to additional levels of finding?

11 DR. PIZZUTIELLO: I'd like to respond to that a  
12 little bit. The way I interpreted that, I like the two the  
13 way these are laid out. The dose level being 350, there's  
14 relatively little uncertainty. If you have doses over 350,  
15 you have a major problem. That I think is very appropriate  
16 as a Level 1.

17 The step process is very valuable, but there is  
18 more uncertainty in knowing exactly what those numbers mean.  
19 So if you're way, way off, if you're below 65 when the  
20 benchmark should be 100, then, again, that's well below the  
21 level of uncertainty. I think that between 80 and 100 that  
22 could be--I'm sorry, between 65 and 80 that could be a  
23 reasonable level of uncertainty to say you have a serious  
24 issue but you don't have to respond within 30 days and come  
25 right back. So I think it has to do with sort of the

1 precision of the measurement indicator that are different  
2 between--

3 MR. MOBLEY: Exactly. And that's one of the  
4 things that I thought, but I just felt like, hey, wait a  
5 minute, I want to comment on that because I wanted to get  
6 that clarified. Thank you.

7 Page 71, 3A, percentage missing. Maybe the  
8 inspectors with their additional training fully and  
9 adequately understand this Item A here. But as I read that,  
10 that's a really convoluted statement or difficult statement.  
11 The fraction of time when QC charting is not done, missed,  
12 is calculated as a percentage of the total number of days  
13 when mammography is practiced during the worst month of a  
14 12-month period or since the last inspection. And I presume  
15 the worst month is the one with the most misses.

16 DR. MONSEES: That's what I presumed.

17 DR. FINDER: It's basically looking at a worst-  
18 case scenario.

19 MR. MOBLEY: Right. This is the worst month of  
20 your year to determine your worst-case percentage or  
21 whatever. I just--that was interesting. It took me a while  
22 to figure out exactly what was being said there.

23 That's the extent of my comments on those issues.

24 DR. MONSEES: Okay. Dr. Sickles?

25 DR. SICKLES: I have a problem with what I

1 perceive as a potential mismatch between 3A and 3C on page  
2 71. This relates to the processor QC charts and percent  
3 missing versus number of days out of control. Unless I've  
4 read it incorrectly, a facility will at any given level of  
5 citation--let's take L1 or L2, because those are the ones  
6 that pertain. At either the L1 level or the L2 level, if I  
7 were a facility and I wanted to avoid getting cited, I am  
8 encouraged to not chart rather than to chart as out of  
9 limits, because the penalties are much more severe for being  
10 out of limits than they are for being missing.

11 I don't know whether you have a rationale for this  
12 and the thinking is, if you're out of limits and you still  
13 do it, you know, you're really a bad person, as opposed to  
14 if you just don't do it, you're a bad person but you're not  
15 that bad.

16 On the other hand, if you're a really bad person  
17 and you know you're out of limits and you realize that the  
18 penalties are less for not charting it, you just won't chart  
19 it.

20 DR. FINDER: Right. This is a point that has been  
21 discussed a lot, and a lot of it comes down to the point  
22 that you just brought up about knowingly operating when  
23 you're out of limits we felt was worse than the situation--  
24 and this situation exists where let's say you've been doing  
25 your processor QC for the week and you skip Wednesday, but

1 Tuesday you were in control and Thursday you were in  
2 control. Chances are Wednesday you were also in control.  
3 Is that as bad as operating when you know that you're out of  
4 control? And our feeling was that the citation should be at  
5 a higher level for those kind of situations.

6 Yes, does that encourage in some minds the ability  
7 to think, well, I'm better off not even charting? That's  
8 one of the problems. Can you force people to--not force but  
9 somehow give certain people the idea that there are ways to  
10 abuse the system? In some sense, yes, but we try and deal  
11 with the facility in general, not the outliers in all those  
12 cases. I mean, we feel we're going to catch those people  
13 eventually using this system. But we did try and make a  
14 differentiation between those that knowingly operate out of  
15 control.

16 DR. SICKLES: Okay. I accept that. I just wanted  
17 to point out that it is open for abuse by a really devious  
18 person. Hopefully there aren't any out there.

19 DR. MONSEES: Yes?

20 DR. PIZZUTIELLO: I think that my own sense is  
21 that the number of 30 percent is extremely high. That's  
22 allowing facilities to operate very many days, unless I'm  
23 misunderstanding this, very many days before they get a  
24 Level 1. Anybody could miss a couple of days, but 30  
25 percent is quite large.

1           My gut sense--and I see 100 or so facilities a  
2 year--is that that number could be 20, and you'd still only  
3 catch the really worst facilities. If a facility is missing  
4 20 percent of their days in a month, I think that's still  
5 quite a significant number. But that's just a gut feeling.  
6 It's not based on any science.

7           DR. FINDER: For an example, the difference  
8 between 20 and 30 percent basically is the difference  
9 between 6 and 4, depending on the number you pick.

10          DR. SICKLES: In many months, a facility will  
11 operate no more than 20 days. And since the 20 percent is  
12 20 percent or greater, you're really talking about the  
13 difference between 3 and 4--4 is the higher level, 3 is the  
14 lower level.

15          I have one more.

16          DR. MONSEES: Yes. Did you have a comment, too?

17          MS. HAWKINS: Yes.

18          DR. MONSEES: Okay. Let's go first to Dr.  
19 Sickles.

20          DR. SICKLES: Okay. I just has one more, and it's  
21 a matter of clarification rather than anything else. On  
22 page 72, in the medical records, number 6 at the bottom,  
23 where you're talking about exam results, I assume here you  
24 mean assessment codes. Is that what you mean by exam  
25 results? If it is, I'd spell it out, and if it isn't, then

1 I don't know what you mean. I would just use the word  
2 assessment codes or something a little bit more explicit  
3 than exam results, because that's kind of a--

4 DR. FINDER: Right. Again, this is wording that  
5 went out as proposed. We're still working on the exact  
6 wording as it will appear in the inspection procedures. So  
7 I think in the latest version, it actually does have  
8 assessment codes.

9 Wally, can you--he nodded his head.

10 DR. MONSEES: Ms. Hawkins, did you have a comment?

11 MS. HAWKINS: Yes. I wanted to ask as for the  
12 Level 3, for lack of having a standard operating procedure.

13 DR. MONSEES: What page is that? I'm sorry.

14 MS. HAWKINS: For handling consumer complaints, on  
15 page 69. I believe the consumer complaint mechanism is a  
16 significant issue under the standards, and that should be  
17 Level 2.

18 DR. MONSEES: Page 69, quality assurance, standard  
19 operating procedure for infection control, L3; standard  
20 operating procedure for handling consumer complaints, L3.  
21 So should they be--did you think that consumer complaint  
22 should be what?

23 MS. HAWKINS: I believe it should be Level 2.

24 DR. MONSEES: Level 2. And how infection control?  
25 We're asking for a policy and procedure manual, right,

1 standard operating procedure?

2 DR. FINDER: Right. Correct.

3 DR. MONSEES: First let's address the consumer  
4 complaints. Does anybody feel that this should stay an L2  
5 or that it should--

6 DR. SICKLES: It's an L3 now.

7 DR. MONSEES: I'm sorry, stay an--I'm saying the  
8 wrong thing. That is should stay an L3 or should be  
9 elevated to an L2? Dr. Sickles?

10 DR. SICKLES: I think there is much more rationale  
11 for considering consumer complaints as L2 than there would  
12 be for the other issue.

13 DR. MONSEES: I agree. And how about infection  
14 control? In view of what we heard yesterday and in view of  
15 consumer concern, I think that the least that we can have is  
16 expect that there will be a standard operating procedure. I  
17 think also it's called for to be an L2. Does anybody  
18 disagree with that?

19 DR. MENDELSON: No.

20 DR. MONSEES: Okay. Any other issues pertaining  
21 to the proposed finding levels? Trish? Patricia Edgerton,  
22 State of California.

23 MS. EDGERTON: Is it my understanding that--or is  
24 my understanding correct that these are the only new things  
25 from the new regs that will be in the inspection package?

1 DR. MONSEES: I'd defer to you on that one,  
2 Charlie.

3 DR. FINDER: Yes.

4 MS. EDGERTON: In that case, it concerns me that--  
5 I thought one of the niftiest things that FDA did in the new  
6 regs was create a lead interpreting physician who is finally  
7 responsible for understanding QA and QC because that's a  
8 huge problem. And I don't see that that's inspected  
9 against, nor is there any documentation that the quality  
10 control technologist has been designated, and are these  
11 people doing their jobs, especially the lead interpreting  
12 physician.

13 DR. MONSEES: So you want to see levels and a  
14 checkpoint where the inspector will ask those questions?

15 MS. EDGERTON: I would definitely suggest you see  
16 documentation that they have designated a lead interpreting  
17 physician and that he does carry out his duties.

18 DR. MONSEES: Okay. How do you feel?

19 MR. MOURAD: May I response?

20 DR. MONSEES: Yes, please.

21 MR. MOURAD: Wally Mourad again. This is buried  
22 under the personnel assignments in the QA program. That  
23 includes the lead interpreting physician, the QC  
24 technologist, and the medical physicist.

25 DR. MONSEES: I'm sorry. Where would that be?

1 MR. MOURAD: You don't see it in there.

2 [Laughter.]

3 DR. MONSEES: It's not a typo, though.

4 MR. MOURAD: Right now we do have a question about  
5 personnel assignments in the QA program, and this question  
6 is reiterated again under the final regs.

7 DR. MONSEES: Okay. It sounds appropriate.

8 Any other questions pertaining to levels here?

9 [No response.]

10 DR. MONSEES: Okay. We're going to--before we  
11 move on to breast implants and then definitions, I just want  
12 to revisit a couple things.

13 One, the missing page 25, QA general, those three  
14 people on this side of the table did not have page 25. Did  
15 you do your homework? Okay. Did you have any questions or  
16 other suggestions now that you have that missing page?

17 [No response.]

18 DR. MONSEES: Okay. So that's taken care of.

19 Another thing that I want to revisit is infection  
20 control, and we had a heated discussion yesterday, and  
21 rather than leave this unsaid, I would like to address one  
22 of the concerns that was raised yesterday during the public  
23 hearing, and that is that the manufacturers seem to have, at  
24 least by the presentation, ambiguous guidelines. I was  
25 wondering if there are any manufacturers in the audience

1 that would like to comment on whether or not they feel that  
2 there would be any difficulty in coming to draw up a very  
3 clear-cut mechanism that institutions could adopt to clean  
4 their buckey and their compression plate? Is there any  
5 problem with issuing such statements? Can we have some  
6 manufacturers answer basically what was raised during the  
7 public hearing? Is there a problem with coming up with a  
8 clear-cut guideline so that facilities could fall back to  
9 manufacturers' recommendations?

10 Could I please hear from some manufacturers?

11 MR. SANDRICK: John Sandrick, GE Medical Systems.

12 I don't work specifically with the infection  
13 control part of this. I believe we have developed  
14 guidelines. I guess one thing I would say, I have seen our  
15 guidelines, and I know what was presented yesterday is only  
16 a brief extract of what we include in there. There's much  
17 more detail. I'm talking about low-level disinfection,  
18 medium-level disinfection, high-level disinfection, and  
19 appropriate materials and methods for each level, defining  
20 what seems to be appropriate for mammography. So there's  
21 more than what was presented yesterday.

22 I don't know what people's reaction to it is in  
23 terms of is it easy to follow or not. I do not get feedback  
24 of that type back. But I know it has been discussed with  
25 the FDA. There was an FDA guidance document on that. I

1 think we've gone through that and reviewed the procedures.  
2 As I say, I have not done that personally, but I think that  
3 sort of procedure has been done.

4 To your point of whether it's easy to follow,  
5 appropriate, I can't really answer that. I don't get that  
6 kind of information back.

7 DR. MONSEES: Okay. That's very helpful to me  
8 because that's concordant with what I'm hearing from our  
9 infection control people; that is, the level of disinfection  
10 has to be coordinated with the level of risk, and in  
11 exposures where there's a lot of blood or that kind of  
12 thing, there's a different level to the disinfection as to  
13 the low-risk situations where skin is put up against it,  
14 where cleansing with a disinfectant may be appropriate. So  
15 I'm glad to hear that there are different levels. It sounds  
16 like those are coordinated.

17 MR. SANDRICK: As I recall, there are those  
18 different levels discussed in our document.

19 DR. MONSEES: Okay. Yes?

20 DR. PIZZUTIELLO: John, is this information  
21 available on older equipment that's out in the field as well  
22 as on new equipment that's being sold?

23 MR. SANDRICK: It is not available on the oldest  
24p456Xequipment. There are probably more cursory guidelines on  
25 the oldest equipment. The guidance came out more in line

1 with some of our more recent equipment over the last couple  
2 of years. So, really, the issue was only raised in the last  
3 couple of years, and it has been included in operator's  
4 manuals for equipment probably introduced in the last couple  
5 of years. In reviewing the MQSA requirements, one of our  
6 goals is to make guidance available, comparable guidance  
7 available on all the different equipment, not that I expect  
8 it will be particularly different, but at least if any  
9 facility should ask for it, we intend to make it available  
10 to them.

11 DR. MONSEES: Thank you.

12 Are there any other manufacturers that want to  
13 comment on the instructions that are given to facilities,  
14 the users of their equipment?

15 Dr. Sickles?

16 DR. SICKLES: I think it would be reasonable,  
17 unless we hear to the contrary from manufacturers, that they  
18 provide, not just on request but maybe on a Website,  
19 information on mammography-related equipment infection  
20 control, not only for units that they're selling now but for  
21 units within reason that they believe may still be in  
22 practice, just so that people who have these units have a  
23 ready way to get at the information.

24 DR. MONSEES: I'd like to see that, too, not  
25 necessarily on the Website but on request, that such

1 information for the various levels of risk and how that  
2 would be applicable to general practice, I'd like to see  
3 that be available for the consumer, being the facility that  
4 might look to the manufacturer for that information.

5 **Breast Implants**

6 DR. MONSEES: Okay. Unless there's any other  
7 comments, we're going to move forward then to--did you want  
8 to make a comment? Okay. All right. We have these agenda  
9 items left: breast implants and then definitions. I think  
10 we've covered most everything else. Can I see a show of  
11 hands from the panel? How many people would like to break  
12 for lunch with these agenda items left? I assume, then,  
13 that everybody would like to continue. Okay. Thank you. I  
14 know that you have to catch a plane.

15 We're going to next tackle breast implants, pages  
16 61 to 62, the larger document; it's page 36 of the small  
17 entity compliance guide.

18 Go ahead.

19 DR. SICKLES: Only a comment. The question  
20 relating to the use of Eklund procedures, you should know  
21 that Dr. Eklund doesn't like these procedures to be given  
22 his name. He prefers to call them implant displace views,  
23 which are the BI-RADS term also. So I think you're probably  
24 better off calling them implant displace procedures.

25 DR. MONSEES: Can we call it views?

1 DR. SICKLES: Views.

2 DR. MONSEES: Whatever. That's my understanding  
3 as well. It's more generic. Yes.

4 Any other comments regarding mammographic  
5 procedure and techniques for mammography of patients with  
6 breast implants?

7 DR. DEMPSEY: Barbara, just one comment about kind  
8 of the practical day-in, day-out working with patients. And  
9 Patricia Wilson might want to comment on this.

10 Not often, but occasionally, patients will not  
11 disclose that they have implants, even when you ask them.  
12 And I don't think we can address it in this. I'm just  
13 saying that as a practical thing, this comes up. And  
14 occasionally it can put a technologist kind of in a bind.  
15 But patients on a surprisingly regular basis in our  
16 practice--and we're pretty busy--will upon questioning deny  
17 that they have implants. And I just want to be sure that  
18 that's stated.

19 DR. MENDELSON: Pete, is this upon being asked  
20 specifically if they have implants, not just have you had  
21 surgery? Because you can often get a negative in response  
22 to that one.

23 DR. SICKLES: I have to second what Pete says. We  
24 have, not infrequently, women who will deny the fact that  
25 they've got implants, and there are two reasons--there are

1 two scenarios. The more common scenario is that in our  
2 mobile unit where we discourage imaging women with implants  
3 because it's just not set up to do so conveniently, there  
4 are some women who, I'm absolutely convinced, purposely are  
5 lying about it because they find the mobile unit more  
6 convenient to get their service, and they repeatedly deny  
7 the presence of implants even though we have flagged their  
8 records the last time they came through.

9           There is a much smaller group of women who will  
10 deny implants, even in a scenario where we could easily do  
11 the implant occluded views, and I have no explanation for it  
12 but it happens.

13           DR. MONSEES: May I just ask a question here?  
14 Because we deal with a lot of patients with implants as  
15 well. Are we talking about when they're scheduled or when  
16 they actually get in the room? Because it's my  
17 understanding once they get in the room--

18           DR. SICKLES: Both.

19           DR. MONSEES: --they're very forthcoming. They  
20 tell the technologist.

21           DR. SICKLES: Both.

22           DR. MONSEES: That's not my experience, but--

23           DR. DEMPSEY: Both. I will tell you that the last  
24 two patients that we've had, I will tell you the reason, and  
25 that is, when we've discovered them and showed the film to

1 the patient, she immediately said, "Don't tell my husband  
2 because he doesn't know I have them."

3 DR. MONSEES: Thank you for sharing that.

4 [Laughter.]

5 DR. MONSEES: How should this affect what the FDA-

6 DR. DEMPSEY: It doesn't. I'm just saying that is  
7 a problem.

8 DR. MONSEES: All right. Any other comments on  
9 breast implants?

10 MS. WILSON: My only comment is all we can mandate  
11 is that our employees ask the question. We cannot mandate  
12 what the patient replies to us.

13 DR. MONSEES: Absolutely. I agree wholeheartedly.  
14 Any other comments here?

15 [No response.]

16 **Definitions**

17 DR. MONSEES: All right. Then we're going to move  
18 on, and we're down to definitions. I'm not sure that  
19 there's any big discussion that's going to follow here. The  
20 only draft guidance document page that I could find was page  
21 4 of that smaller document. Did I miss something? Any  
22 other place for definitions? Because I didn't see any  
23 others.

24 DR. FINDER: The other definition, I believe,  
25 includes direct notification--not direct notification but

1 direct supervision.

2 DR. MONSEES: Oh, under general, where it was  
3 under general?

4 DR. FINDER: Well, there's direct supervision in  
5 the first document, Document A on page 16 under the  
6 radiologic technologist.

7 DR. MONSEES: I see. That was page 3, direct  
8 supervision means that...

9 DR. FINDER: Right.

10 DR. MONSEES: Okay. That was one. And then in  
11 the second document, the smaller one, mammographic modality  
12 means and qualified instructor means. Do you all see that?  
13 That's page 4 of the small document for the mammographic  
14 modality and the qualified instructor, and supervision,  
15 direct supervision was page 3 of the first document.

16 Do we want to give any, offer any guidance to FDA  
17 regarding these definitions?

18 DR. FINDER: Let me just say one thing, that  
19 direct supervision also appeared for each of the personnel  
20 categories, interpreting physician, technologist, and  
21 medical physicist, and I believe that they were basically  
22 gone over when we went over the major sections.

23 DR. MONSEES: I think we did. We did. I think we  
24 included it under general in the beginning of the  
25 discussion. But this page, at least, has not been

1 previously discussed, page 4 of the smaller document,  
2 definitions.

3 DR. FINDER: And, again, we did discuss at least a  
4 part of this when we talked about the mammographic modality.

5 DR. MONSEES: Right. I think we discussed this  
6 actually in another context. You're right. Mammographic  
7 modality means a technology within the scope of, blah, blah,  
8 blah, basically the 42 USC 263(b) for radiography of the  
9 breast. Examples are film screen as your mammography, and  
10 there is no other example. Ultrasound is not a modality.

11 DR. FINDER: The comment was made before to  
12 include as the negative, in effect, for ultrasound and MRI,  
13 to specifically mention that.

14 DR. MONSEES: Okay. So are there any other  
15 comments pertaining to definitions?

16 [No response.]

17 DR. MONSEES: All right. Is there anything we  
18 missed or anything we want to revisit? Take a moment to  
19 look through your documents and see if you made any notes to  
20 yourself. Are there any other comments that we want to  
21 offer to the FDA in terms of guidance about their guidance  
22 document?

23 DR. FINDER: One thing I did want to bring up in  
24 terms of the technologist and the medical physicist, I  
25 believe in the versions that you have, there was a--for

1 example, on page 10 of the B document, for the continuing  
2 experience requirement, you saw the change that occurred  
3 there.

4 DR. MONSEES: Yes.

5 DR. FINDER: The modification. Those technical  
6 amendments actually have been published, so that now is  
7 official. So in terms of when people will have to actually  
8 meet the requirement, this guidance now is applicable and it  
9 actually will be put out.

10 DR. MONSEES: When they appear on the Website, if  
11 there are corrections, are they corrected where they  
12 originally were, or do you have to look at some other place  
13 on the Website for the newer documents? For example, when  
14 this becomes public information, will this be corrected in  
15 the original Website document? Do you know what I'm saying?

16 DR. FINDER: Yes. Well, now that it has become  
17 official, we can actually make the changes, and we are able  
18 to make the changes on the Website. Obviously we can't make  
19 it in the copies that have already been sent to everybody.

20 DR. MONSEES: Right.

21 DR. FINDER: But the idea is, again, to use the  
22 new electronic mechanisms, the Website, to update and keep  
23 everything current so that when there's one change we don't  
24 have to send out a huge document again to everybody. We can  
25 just notify people that there are these changes.

1           We have to go through our own process, though, to  
2 get, quote-unquote, the official versions through. It takes  
3 some time, but, yes, these changes will go into any  
4 electronic versions that are available to the public.

5           The other thing is that we plan to notify  
6 facilities as best we can about these changes in addition to  
7 those electronic versions, for example, at any of the  
8 conferences that we go to, because this especially has been  
9 a question that we've been getting a lot of, is when people  
10 are going to have to meet this continuing experience  
11 requirement. So if you're at a meeting, feel free to  
12 announce this if anybody asks--or even if they don't ask--  
13 because now it's official.

14           DR. MONSEES: Yes?

15           DR. PIZZUTIELLO: At the last meeting, we talked  
16 about some of the changes coming out in the Federal Register  
17 relating to the collimation, and I had asked if we could be  
18 notified as a committee when those came out in the FR since  
19 we don't read these things ordinarily, particularly in this  
20 case.

21           DR. FINDER: I can see that you get a copy of the  
22 FRs sent to your house.

23           DR. PIZZUTIELLO: But particularly in this case,  
24 since we've all been involved in this process, when the  
25 document that's on the Web gets updated, could I ask that

1 the committee members be notified so that we could know to  
2 then go and download the updated copy?

3 DR. FINDER: Okay. Let me just update you on  
4 that. As we talked about, there was already the alternative  
5 standard that was approved that we've discussed already. I  
6 believe it was last week--within about the last week, a  
7 proposed amendment to the performance standard involving  
8 collimation was published in the FR. I was hoping that the  
9 one for MQSA would have published in time for us to mention  
10 it here. It may have just been published. It's going to be  
11 within any day or two, I believe. That's what I've been led  
12 to believe. So I would say that when you get back home,  
13 check the Website. It should be up there. I found the one  
14 for the performance standard under our CDRH home page under  
15 new FR notices or updates on that. They list all the FRs  
16 that come out of the entire center.

17 So as I say, it was just a few days ago that the  
18 performance standard got published--as a proposal, now. And  
19 the MQSA one I believe is just a few days behind.

20 DR. MONSEES: Okay. Did anybody discover--yes?

21 MS. BROWN-DAVIS: I'd like to revisit this patient  
22 notification when there is a problem at a facility. I, too,  
23 like Dr. Sickles, although he was thinking about something  
24 else last night, slept on something. I slept on this last  
25 night, and I just cannot leave it as loose as it is.

1 Certainly today's--it's on page 65 in the big document,  
2 paragraph 2, I guess, at the beginning, the top of the page,  
3 the last sentence.

4 DR. MONSEES: If FDA determines that any activity  
5 related to the provision of mammography at a facility may  
6 present a serious risk to human health such that patient  
7 notification is necessary, the facility shall notify patient  
8 or their designees, their physicians, or the public of  
9 action that may be taken to minimize the effects of the  
10 risk. Such notification shall occur within a time frame and  
11 in a manner specified by the FDA.

12 So now specifically are we talking about time  
13 frame again like we did yesterday?

14 MS. BROWN-DAVIS: Yes.

15 DR. MONSEES: Okay.

16 MS. BROWN-DAVIS: It's just too loose, and I think  
17 that the FDA needs some guidelines on what is reasonable. I  
18 compare it to the automobile industry. This is one of the  
19 things that I thought about last night. For instance, if  
20 there's an automobile recall as an example, there's a  
21 certain amount of time that the manufacturer has to get back  
22 to people that have bought that car. It's on the public,  
23 you know, to do something about it, to come back in, but  
24 there's a specific amount of time that they have to do that.  
25 And certainly a woman's mammogram is as important as a

1 vehicle that he or she may drive.

2 DR. MONSEES: Okay. That's a good analogy. We  
3 offered guidance to the accrediting body regarding the time  
4 limit there. What would you propose? And let's see whether  
5 that time limit would be feasible because we have to think  
6 about what ducks have to be put in a row.

7 MS. BROWN-DAVIS: Right. I'd be willing to  
8 entertain discussion about this and perhaps look at those--  
9 you know, perhaps this is an instance when we need to again  
10 look at a progressive state, like California as an example,  
11 someone that has actually been involved in the process, and  
12 see what their guidelines are.

13 DR. MONSEES: Does the State of California have  
14 experience that they could share with us?

15 MS. EDGERTON: I can answer any specific questions  
16 you have. Using your analogy of the automobile industry,  
17 they also have to investigate and get to a point where they  
18 recognize there's a problem. Once they recognize a problem,  
19 there's a time frame. And when we request--when we mandate  
20 facilities notify patients, which is only an extreme  
21 escalated enforcement, we say they have to do it no later  
22 than 30 days. It's a maximum of 30 days.

23 MS. BROWN-DAVIS: I think when Dr. Monsees asked  
24 you yesterday what was the amount of time that a complaint  
25 was taken care of, I think you said, if I'm not mistaken,

1 the next day up to 60 days. So that would make the entire  
2 process 90 days, which to me, you know, gives--seems  
3 reasonable. I think it could be better, but that seems  
4 reasonable.

5 MS. EDGERTON: Unfortunately, I can envision  
6 circumstances that it might take longer than 60 days to  
7 investigate.

8 DR. MONSEES: Well, do we want to put a time frame  
9 on the collective or only on from the time they decide  
10 whether patient notification needs to occur? Because if we  
11 give it for the entire expanse and they find out day one,  
12 then you're giving the facility 90 days, and you don't want  
13 to give them 90 days once they know. I think once they  
14 know, we need to be strict about when they need to notify.  
15 Where it's more ambiguous and you don't want to give them  
16 that time is how long it's going to actually take to  
17 investigate, and that, you know, you're dealing with  
18 reputable organizations, accrediting bodies, you're talking  
19 about the FDA, that are going to hopefully push this along,  
20 unlike a facility that may not be willing to be cooperative,  
21 in which case you really want to be strict about it.

22 Do you understand my point? So how about if we  
23 give most of our guidance from the point where it's  
24 understood whether patient notification needs to occur? I'd  
25 feel comfortable with that. I don't know how you feel about

1 that.

2 MS. BROWN-DAVIS: Yes, as long as we can come up  
3 with a specific number. I just have a problem with this,  
4 nobody having--and although the FDA is a reputable, you  
5 know, agency--there's no question about that, but the FDA is  
6 made up of human beings who have a number of projects in  
7 which they're involved. And the accreditation bodies have a  
8 number of things that they're working on. A woman who has  
9 received a mammogram at a faulty facility I think has the  
10 right to know how long it will be before she is notified.

11 DR. MONSEES: Right. The question is: How long  
12 before they decide whether or not she needs to be notified?  
13 And that's where the investigation part comes into play.

14 MS. EDGERTON: If I could just make one quick  
15 comment?

16 DR. MONSEES: Yes.

17 MS. EDGERTON: I know that when we get evidence or  
18 a complaint that there is a clinical image problem versus,  
19 you know, a parking problem at a facility, it does take our  
20 utmost attention and we do follow up on it as quickly as  
21 possible, and in this one case, you know, doing the targeted  
22 clinical image review as a way to finally have a stamp. We  
23 have to look at people taking us to court, too, and saying  
24 you shut us down or you did this, and we have to respond to  
25 FDA and have reasonable explanations for our actions as an

1 accrediting body. So we want to make sure that we have good  
2 evidence and evidence that could possibly stand up in court  
3 before we shut down a facility, because we do revoke  
4 accreditations of facilities who demonstrate very poor work.  
5 So for us, it's like kind of all or nothing. So we want to  
6 make sure we're in good shape.

7 MS. BROWN-DAVIS: Right, and I understand the need  
8 to want to give yourself enough time. But I think that it's  
9 important that the FDA be willing to more or less regulate  
10 the time that you take to get back with the woman who's had  
11 the faulty--I know that's difficult, but I think it's  
12 imperative, if we're going to get the respect of--much like  
13 Ms. Hawkins spoke to earlier, the respect of the consumer  
14 community.

15 DR. MONSEES: How about if we stipulate something  
16 like that the accrediting body--because, now, don't forget  
17 the serious complaints are going to the accrediting body--  
18 that the accrediting body and the FDA make every effort--not  
19 to say necessarily every last one, but every effort and  
20 maintain documentation about the track record, to determine  
21 whether patient notification--or determine whatever  
22 endpoint, whether it's patient notification or whether it's  
23 resolved, within 60 days and that once a decision is made  
24 that patient notification is felt to be necessary, that that  
25 be accomplished by the facility within 30 days? Does that

1 seem reasonable? Can I hear from people here? Is this out  
2 of the range of what's accomplishable? Then we're not tying  
3 their hands--

4 MS. EDGERTON: That's certainly what we do today.  
5 It's what we do today, because that guidance that when we  
6 get a complaint like this that it moves to the front of the  
7 line, as far as investigation, and that we would want to  
8 keep documentation that we have done everything we can and  
9 as quickly and as timely as we can. So it seems reasonable.

10 DR. MONSEES: I'm going to want to hear also from  
11 the large AB, the ACR, as to whether they think that's  
12 accomplishable. Yes?

13 DR. DEMPSEY: I would like to underscore a point  
14 that's been made her, and that is, it's very important to  
15 dissociate in our talk here the initial investigation time  
16 versus what is done after the facts are proven, and also to  
17 dissociate between facility, accrediting body, and FDA.  
18 Because it's my experience that most complaints can be  
19 resolved at a facility level if the proper channels are  
20 followed, but the time frame--and this is addressing my  
21 comments to Carolyn--the time frame for investigation is  
22 extraordinarily variable. It could be as short as a day or  
23 two, but it could be weeks.

24 We currently have a problem of a written report  
25 that went to an inappropriate person that was brought to our

1 attention by the patient, and, you know, we're three, almost  
2 four weeks out, trying to figure out how this happened, and  
3 we still haven't gotten it. But the patient knows, because  
4 we've been back to her several times, that this is ongoing.

5 The most important element in this process is  
6 continued communication with the patient so that she knows  
7 that this is being pursued with due diligence. But I think  
8 you have to separate the investigative process from what  
9 happens after the facts are unequivocally established. And  
10 I agree with California. Once that's known, you can move  
11 pretty quickly.

12 DR. SICKLES: I'd like to support what you just  
13 laid out in your summary, giving guidelines of what we  
14 expect to be close to an upper limit for investigation and  
15 then a very specific time for action once action is deemed  
16 necessary.

17 Unfortunately, there is another aspect over which  
18 we have absolutely no control in cases that may eventually  
19 require patient notification, and that is that it could take  
20 six months from a time that a given woman had a mammogram  
21 until even a complaint was made relative to her mammogram.  
22 So I don't think we'll ever be able to have a situation  
23 where anyone can say to a woman, unfortunately, you know, if  
24 you haven't heard anything from the FDA within 90 days you  
25 know your mammogram was good, because it could be that she

1 had a mammogram; six months later, somebody finds out there  
2 was a problem at a facility. They go investigate it. It  
3 takes another 60 days, and then it could be a lot longer  
4 just because nobody knew there was a problem.

5 DR. MONSEES: That's a given. Yes, I think we--

6 DR. SICKLES: But we have to understand that.

7 MS. BROWN-DAVIS: We are talking generally about  
8 90 days from the time that the complaint is filed or made.

9 DR. MONSEES: Correct.

10 MS. BROWN-DAVIS: Not from the time--right, to  
11 realize, not from the time she's given a mammogram.

12 MR. PIZZUTIELLO: I support the numbers, and to  
13 clarify, I don't think we're talking about reputable or  
14 unreputable. We're really talking about self-interest. It  
15 is in the interest of the accrediting body and in the  
16 interest of FDA to proceed with all due diligence on these  
17 issues. It may not be perceived to be in the facility's  
18 interest, so that's why I think it makes sense to clamp down  
19 tighter on the facility, not because they're not reputable  
20 but because it might be perceived to be in their interest.  
21 We want to force that hand.

22 DR. MONSEES: Thank you. I think that's probably  
23 a better choice of words. I was struggling for something.

24 Can we hear from the AB, the ACR, to see whether  
25 they think these time limits are appropriate?

1 MS. WILCOX-BUCHALLA: I certainly think that the  
2 30-day patient notification from when a decision is reached  
3 is very reasonable. I can see where there are situations  
4 where even with due diligence, 60 days may not be enough  
5 time to complete the investigation for a variety of  
6 scenarios. We have had scenarios where we've asked one of  
7 our reviewers to go out and review a large volume of  
8 mammograms from a given facility, as many as 400. I have  
9 concerns about the ability to maintain objectivity in  
10 looking at those mammograms when you try to do that kind of  
11 bulk in a short period of time. So we need to make sure  
12 that the processes are reasonable and fair so that women get  
13 notified appropriately and not because of some variable that  
14 we've introduced by time constraints.

15 Site visits, when we need to do a sit visit to  
16 validate a complaint, depending on where it is, when it is,  
17 seasonal problems, we also, if you'll remember--this is  
18 because of the military. It's an international program.  
19 And so if there is a need to do a site visit outside of the  
20 country, that may limit how quickly we can get something  
21 scheduled.

22 So what Dr. Monsees proposed is saying in all--  
23 make every effort to deal with it within 60 days but to  
24 allow for extenuating circumstances or a step-wise  
25 investigation I think makes sense. To set limits that are

1 concrete--they're not a reg, so they're not going to be  
2 concrete, anyway, but to make strong recommendations. And I  
3 certainly think that all of the ABs and the FDA are  
4 committed to any instance where we are concerned that  
5 patients may have had poor mammograms, expediting that in  
6 every possible way. That's what we're all about.

7 DR. MONSEES: Could we tie to that--maybe, I don't  
8 know how difficult it would be--that if it doesn't come to  
9 closure in the 60 days, that merely the patient--the person  
10 who's making the complaint is notified that the  
11 investigation is ongoing and that it's more time-consumer so  
12 that they would know?

13 MS. WILCOX-BUCHALLA: Absolutely. And I think Dr.  
14 Dempsey's point that open communication with the person who  
15 is filing the complaint is critical to making sure that we  
16 are responsive.

17 DR. MONSEES: I'd feel comfortable with that. Do  
18 you feel better about that?

19 MS. BROWN-DAVIS: Much better. Thank you.

20 DR. MONSEES: Will you sleep better tonight?

21 [Laughter.]

22 DR. MONSEES: Do you feel comfortable with that?

23 MS. HAWKINS: I feel comfortable with it, although  
24 I think it's--we should be clear about the fact that when we  
25 think in terms of patient notification because of a public

1 health risk, this is going to follow additional mammography  
2 review, which is going to be a timely process. And so not  
3 to get into that expectation that this could happen in 60--  
4 this may happen, you know, at the end of--it may not come to  
5 FDA's attention until after surveys are done or surveys or  
6 reports, annual reports.

7 DR. MONSEES: That's right.

8 MS. HAWKINS: And so it's going to be a bit  
9 different from patient notification on a consumer complaint  
10 and so forth. I think we ought to make sure we understand  
11 that.

12 DR. MONSEES: Okay. Any other outstanding issues,  
13 any other things that we need to revisit before we adjourn?

14 [No response.]

15 DR. MONSEES: In terms of what we need to discuss  
16 at the next meeting, which we're not sure exactly when that  
17 will be, but in the spring, if you have any issues that  
18 you'd like me to know about and to bring up with the FDA,  
19 please don't hesitate to contact me or Dr. Finder. I'll  
20 offer his name.

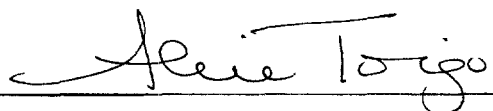

21 Thank you very much for your patience and your  
22 efforts, and we'll see you in the spring. We're adjourned.

23 [Whereupon, at 12:10 p.m., the committee was  
24 adjourned.]

## *C E R T I F I C A T E*

I, **ALICE TOIGO**, the Official Court Reporter for Miller Reporting Company, Inc., hereby certify that I recorded the foregoing proceedings; that the proceedings have been reduced to typewriting by me, or under my direction and that the foregoing transcript is a correct and accurate record of the proceedings to the best of my knowledge, ability and belief.
